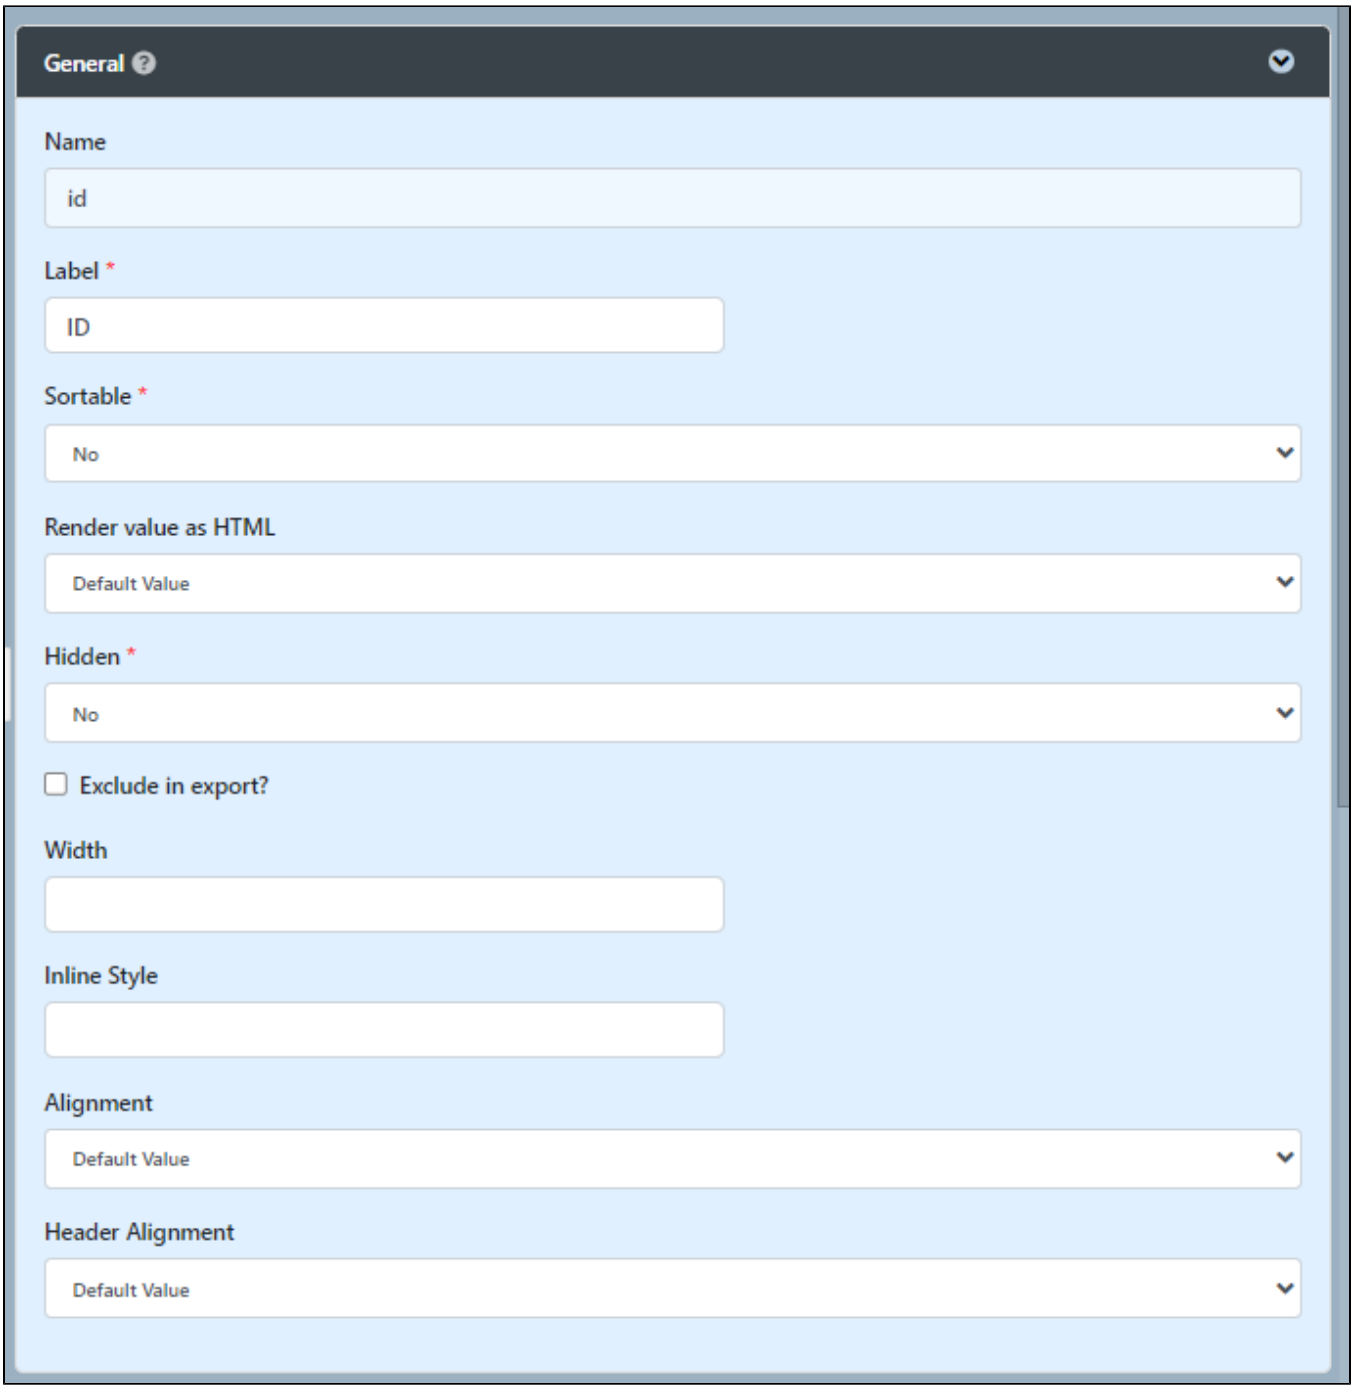
Column Properties

General



Name	Description
Name	Column name This is the name that you will need to use to refer to when defining **Extra Filter Condition** in the **Source**'s **Binder.**
Label	Column label.
Sortable	When checked, the user will be able to sort the data list using this column.

Render value as HTML	Render value as HTML • Default Value. • No. • Yes.
Hidden	When checked, this column will not be shown/visible to the end-users but will still be rendered in the background.
Exclude in export?	When checked, this column will not show up when the user exports them by clicking on the export links at the bottom of the list. Width	Width of the column in characters, you can enter in px or percentage (preferable). For example: 200px or 20%.
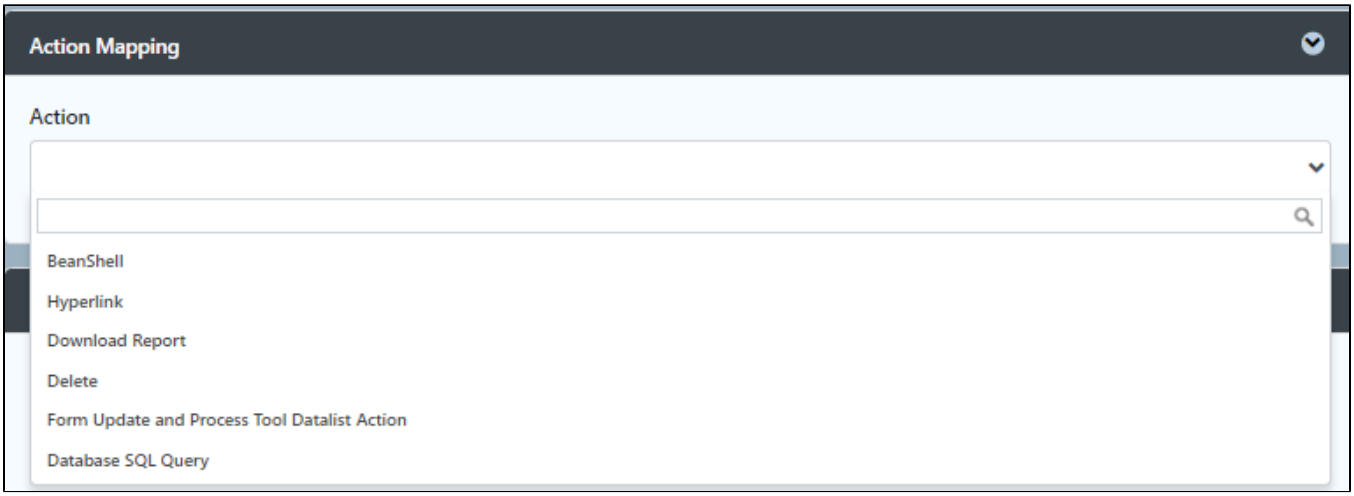
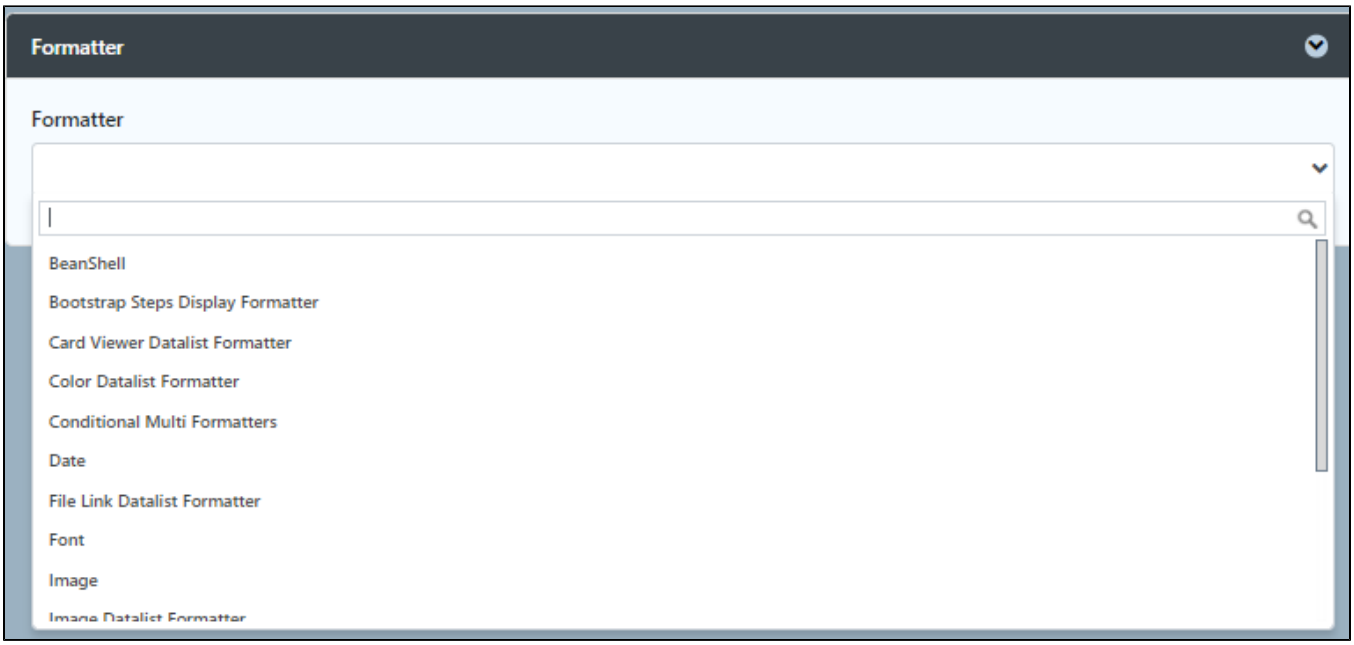
Inline Style	Column inline styling in CSS. For example: background-color: blue;
Alignment	• Default Value • Center • Left • Right
Header Alignment	• Default Value • Center • Left • Right

Action Mapping



Name	Description
Action	Instead of merely showing a textual value, one may transform the particular column into a List Action. Actions available are based on the available List Action Plugin in the system. See List Action for more information.

Formatter



Name	Description
Formatter	Attach a Formatter plugin to transform the current value display. The list of Column Formatter are as follows: • BeanShell Formatter • Date Formatter • Font Formatter • Image Formatter • Javascript Condition Formatter • Nested List Formatter • Options Formatter • Process Status Formatter
