

## How to create report

Hi,

I have installed joget workflow v3 at my windows. I have successfully created a application and process with several forms, datalists, userviews. Now I am stuck into Report generation. Every where it has been said that joget build up with JaperReportServer. But still I am unable to find how to work with it. Since I am very new in joget I am unable to solve this problem myself. I have downloaded and installed iReport at my machine in hope for creating a xml file by which I am able to show a graphical report at userview. But while I am trying to configure the JasperReport server I am stuck at Repository navigator.. I cannot create any report.

Please somebody help me to create a User report with my existing workflow.

Thanks & regards
