JSON API

Previously to the recent joget update the bellow url worked perfectly:

http://trialjoget.trial.joget.com/jw/web/json/workflow/process/start/TESTE1:8:procReqForm

A new process of "TESTE1:8:procReqForm" was launched every time I executed the url.

Now if I run the very same URL I get the following response:{"error":{"message":"","code":"404","date":"Tue Apr 01 13:52:42 UTC 2014"}}

Can anyone help me on this?
