

PDF Creation Error - org.xml.sax.SAXParseException

I've been able to get simple forms to export as a PDF and added as an attachment to emails. I've even been able to customise them and make them really useful for the purpose we're using them for. However on any complex form (the ones I really need it for) I get an error on the
 tag that I can't see and don't know where it is.

Error Message

```
INFO 15 May 2014 16:19:10 org.joget.plugin.enterprise.ExportFormEmailTool - ExportFormEmailTool: Generate PDF start.
ERROR 15 May 2014 16:19:10 org.joget.apps.form.service.FormPdfUtil - org.xml.sax.SAXParseException;
lineNumber: 108; columnNumber: 15; The element type "br" must
be terminated by the matching end-tag "</br>".
org.xml.sax.SAXParseException; lineNumber: 108; columnNumber: 15; The element type "br" must be terminated by
the matching end-tag "</br>".

```

Here is the Preview (the nearest I can get to the code being converted) and there are no
 tags anywhere.

HTML Code

```
<div id="" class="subform-column" style="width: 49%" >
<h3 class="subform-column-label">

</h3>
<div class="subform-cell" >
<label class="label">Date Raised <span class="subform-cell-validator"></span></label>
<span>15-May-2014 16:05</span>
<input id="field43_job_details_contractor_dateRaised" name="field43_job_details_contractor_dateRaised"
type="hidden" value="15-May-2014 16:05" />
</div>

<div class="subform-cell" >
<label class="label">Damage Details <span class="subform-cell-validator"></span></label>
<div class="subform-cell-value">
<div>Attempted Break-in</div>
<input id="field43_job_details_contractor_damageDetails" name="
field43_job_details_contractor_damageDetails" type="hidden" value="Attempted Break-in" />
</div>
<div style="clear:both;"></div>
</div>
```

I can't find where the error is occurring.

Any thoughts?

Hugh
