

Show and Hide Form Sections

You can make a section of a form visible or hidden depending on the value of other form fields.

In the example below, we want to show only the **Rejection** section when **Status** is set to **Rejected**.

The image shows a form with two sections: 'Approval' and 'Rejection'. The 'Approval' section is a light gray bar at the top. Below it is a 'Status' label followed by a dropdown menu showing 'Rejected'. Below the 'Status' dropdown is the 'Rejection' section, also a light gray bar. Under the 'Rejection' section is a 'Reason' label followed by a large text input area. The 'Reason' input area is empty and has a small icon in the bottom right corner.

Figure 1: Show/Hide Section Depending on Field Value

Configuration of visibility is done in the target section. Remember to retrieve the information needed from the **Select Box** properties first.
