

Combine All Actions Into A Dropdown Select Box

The following sample script is useful to transform a list that contains many action links into a single dropdown select box.

Place these codes in **Userview Builder > Settings**.

```

Custom Javascript

window.addEventListener('load', function () {

    setTimeout(function(){
        $("tbody:visible > tr:visible").each(function(){
            actionLink = $("li.action-link-modal").clone();

            if($(this).find("td.row_action a").size() > 0){
                $(this).find("td.row_action a").each(function(){
                    $(actionLink).find("ul").append( "<li>" + $(this).prop("outerHTML") + "</li>");
                });
                $(this).find(".footable-last-column").append( actionLink );
                $(actionLink).removeClass("action-link-modal").show();
                $(this).find("td.row_action").not(".footable-last-column").remove();
                $(this).find(".footable-last-column .row_action_inner").remove();
            }
        });

        if($("tbody:visible > tr:visible").size() > 0){
            $("th.row_action").not(".footable-last-column").remove();
        }

    }, 1000);

}, false);
    
```

The script above will affect all datalist in the app. If you want to only apply it to a certain datalist, change lines 4 and 18 accordingly by prepending the datalist ID.

This is how line 4 will look like after appending the datalist ID.

```
$("#requestListAll > tbody:visible > tr").each(function(){
```

This is how line 18 will look like after appending the datalist ID.

```
if($("#requestListAll > tbody:visible > tr:visible").size() > 0){
```

Sub Header

```
<li class="action-link action-link-modal dropdown" style="display: none; list-style: none; margin: 15px;">
  <a data-toggle="dropdown" class="btn dropdown-toggle waves-effect btn waves-button waves-float" aria-
  expanded="false">
    Action
    <span class="caret"></span>
  </a>
  <ul class="dropdown-menu">

  </ul>
</li>
```

Custom CSS

```
.action-link.open .dropdown-menu {
  width: max-content;
  left: unset;
  right: 0;
}

.action-link .dropdown-menu {
  width: max-content;
  left: auto;
  right: 0;
}
```
