- org.joget.apps.app.service.MobileUtil
- Under wflow-core module
- Utility classes for mobile related features.

Code Sample

```
import org.joget.apps.app.service.MobileUtil;

if (MobileUtil.isMobileView()) {
    //return mobile html template
} else {
    //return normal html template
}
```

Fields

MOBILE_VIEW

```
public static final String MOBILE_VIEW = "_mobileView_";
```

A key used to set the HTTP request attribute when it is a mobile view.

Methods

isMobileDisabled

```
public static boolean isMobileDisabled()
```

Flag to indicate the mobile support is disabled by system

isMobileUserAgent

```
public static boolean isMobileUserAgent()
```

Checks whether the current thread is being called from a mobile browser

isMobileUserAgent

```
public static boolean isMobileUserAgent(javax.servlet.http.HttpServletRequest request)
```

Checks whether the current request is being called from a mobile browser

isMobileView

```
public static boolean isMobileView()
```

Checks whether the current request is a mobile view

setDisableMobile

```
public void setDisableMobile(boolean disabled)
```

Sets to disable the mobile support

setMobileView

```
public static void setMobileView(javax.servlet.http.HttpServletRequest request, java.lang.Boolean  
mobileView)
```

Sets a flag to indicate whether or not the current request is a mobile view.
