

Datasource & Profile Setting

Joget is backed with [Hibernate](#) which enables it to connect to major RDBMS (Relational Database Management System). Out of the box, the Joget installer comes embedded with MySQL DBMS but it may be connected to other RDBMS easily such as IBM DB2, Microsoft SQL Server, Oracle, and so on.

Datasource & Profile Setting management makes it easy for you to switch between different profiles that hold individual database settings. Only one active profile is allowed at any time.

The screenshot shows the 'Joget Workflow Enterprise' interface. At the top, there is a navigation bar with the following items: 'Home (Welcome Page)', '1 Setup Users (Setup Organization & Users)', '2 Design Apps (Workflow, Forms, etc)', '3 Run Apps (Run Apps)', and '4 Monitor Apps (Monitoring & Reports)'. The top right corner contains 'System Settings | Profile (admin) | Logout'. On the left side, there is a sidebar menu with the following items: 'General Setting', 'Datasource & Profile' (which is highlighted with a green arrow), 'Directory Manager Setting', 'Manage Plugins', and 'Manage Messages'. The main content area is titled 'Select Profile' and features a dropdown menu set to 'default', a 'Switch' button, and a 'Delete' button. Below this, there are four input fields: 'Driver Name' (containing 'com.mysql.jdbc.Driver'), 'URL' (containing 'jdbc:mysql://localhost:3307/jwdb?characterEncoding=UTF-8'), 'User' (containing 'root'), and 'Password' (empty). At the bottom, there are three buttons: 'Save', 'Save As New Profile', and a 'New Profile Name' input field.
