

Process Start White List

Process Start White List defines who is permitted to start the process. By default, everyone can start the process. But when configured, only those found in the mapping will be allowed to do so.

The screenshot shows a web interface with a navigation bar at the top containing four tabs: 'Map Participants to Users' (active), 'Map Activities to Forms', 'Map Tools to Plugins', and 'Variable List'. Below the navigation bar, there is a text block stating 'This is the list of participants defined in the Workflow design.' followed by three entries:

- Requester**
Id : requester [Add/Edit Mapping]
- HOD**
HOD : Manager [Add/Edit Mapping]
- Process Start White List**
Id : processStartWhiteList [Add/Edit Mapping]

The 'Process Start White List' entry is highlighted with a red border.

Figure 1: Map Participants to Users - White List

Process Start White List has the same mapping options found in conventional participant mapping, thereby making available a wide range of options.

You may also write your own beanshell script or extend it using custom participant mapping plugin.

The screenshot shows the 'Map Participants to Users' configuration page. At the top, there is a navigation bar with four tabs: 'Map to User or Group' (active), 'Map to Org Chart', 'Map to Workflow Variable', and 'Map to Plugin'. Below the navigation bar, there are two sub-tabs: 'Map to Group' (active) and 'Map to User'. Below the sub-tabs, there is a 'Filter By Organization' dropdown menu and a 'Search' input field. Below the search field, there is a table with the following data:

<input type="checkbox"/>	Group Id	Group Name	Group Description	Organization
<input type="checkbox"/>	G-002	CxO		
<input type="checkbox"/>	G-003	hrAdmin		
<input type="checkbox"/>	G-001	Managers
