Figure 1: Configure with your Email Configuration

The screenshot shows the 'Email Test App' interface. At the top right, there is a 'Logout' button with a gear icon. Below the header, the date 'Thu, 13 Nov 2014' is displayed. A sidebar on the left contains a 'Home' menu and a 'Test Email Form' link. The main content area displays a 'Validation Error' with a stack trace of Java exceptions, including 'PKIX path building failed' and 'unable to find valid certification path to requested target'. Below the error, there is a form titled 'Section' with the following fields:

- SMTP Host *: smtp.gmail.com
- SMTP Port *: 465
- Security: SSL (dropdown menu)
- SMTP Username: test@gmail.com
- SMTP Password: [masked with dots]

Below this form is another 'Section' header, followed by a 'From *' field containing the email address 'test@gmail.com'.
