

Duplicate Form Grid

In this article, we will learn on how to clone/duplicate entries from one Form Grid to another Form Grid.

The screenshot shows a web application interface with a dark blue header containing a menu icon, the text "GRIDCOPY", and a home icon. Below the header, there is a breadcrumb trail: "Home > / Manage main".

The main content area is titled "Section" and contains two grids:

- Grid 1:** A table with three columns labeled "field1", "field2", and "field3". It contains two rows: "Row 1" and "Row 2". Each row has a blue pencil icon and a red 'X' icon to its right.
- Grid 2:** A table with four columns labeled "field1", "field2", "field3", and "field4". It is currently empty and has a green plus icon below it.

Below the grids, there is a modal dialog with the following elements:

- A button labeled "Copy Grid 1 to Grid 2" with a mouse cursor over it.
- Two buttons labeled "Save" and "Cancel" below the main button.

In the bottom right corner, there is a "Print" button with a printer icon. At the very bottom, the text "Powered by Joget" is displayed.

In line 5 and 6, change the source and target form grid field IDs accordingly.

Code

```
<p><a class="copy btn">Copy Grid 1 to Grid 2</a></p>
<script>
$(function(){
  $(".copy").on("click", function() {
    var grid1 = FormUtil.getField("field1");
    var grid2 = FormUtil.getField("field2");

    $(grid1).find(".grid-row").each(function(){
      var json = $(this).find("textarea").val();

      //remove id
      var obj = JSON.parse(json);
      if (obj.id !== undefined) {
        delete obj.id;
        json = JSON.stringify(obj);
      }

      $(grid2).enterpriseformgrid("addRow", {result: json });
    });
  });
});
</script>
```
