

Lockout Mechanism

Password Lockout Mechanism

Joget allows administrators to lock the accounts. The account lockout policy disables a user account if an incorrect password is entered a specified number of times.. These settings prevent attackers from guessing users passwords, thus preventing attacks.

To activate these settings, go to System Settings > Directory Manager Settings > Configure Plugin (Security Enhanced Directory Manager)

Plugin Configuration ✕

General

General > Default Directory Password Policy > Notification > External Directory Manager

Show Login Info (e.g. Last Login Date)

Failed Login Attempts for Account Lockout

Account Lockout Period (Minutes)

Allow Session Timeout (Inactivity Timeout)

Hard Session Timeout (Hours)
