

Resources

Definition

Resources is used to manage/store commonly used files meant for the App. For example, you may upload a logo/background images that will be used throughout your App.

For each resource (file) added, you may manage its permission settings. You should limit the use of the files to within your own App as a good practise.

The screenshot shows the 'Resources' tab selected in the 'Properties & Export' section of the 'Design App: Expenses Claim' interface. The left sidebar contains navigation options: 'Design App: Expenses Claim', 'Version 1', 'Published', '1 Forms & UI', '2 Processes', '3 Properties & Export' (highlighted), and 'All Apps'. The main content area features a top bar with buttons: 'Add Environment Variable', 'Add Message', 'Add Resource', 'Set Plugin Default Properties', and 'Export'. Below this is a tabbed interface with 'Resources' selected. A search bar is present above a table with the following data:

<input type="checkbox"/>	File Name	Size	Permission
<input type="checkbox"/>	claims_icon.jpg	29.9 kB	

At the bottom of the table, there is a pagination control showing '15' items per page, 'Page 1 of 1', and 'Displaying 1 to 1 of 1 items'. A 'Delete' button is located below the table.

Figure 1: Properties & Export - Resources

The screenshot shows the 'Add Resource' dialog box open in the 'Properties & Export' section of the 'Design App: Expenses Claim' interface. The dialog has a title bar 'Add Resource' and a 'Select File' section with a 'Choose file' button and the text 'No file chosen'. Below this are 'Upload' and 'Cancel' buttons.

Figure 2: Properties & Export - Resources - Add Resource

Add Resource allows you to upload a file to be added into the App.

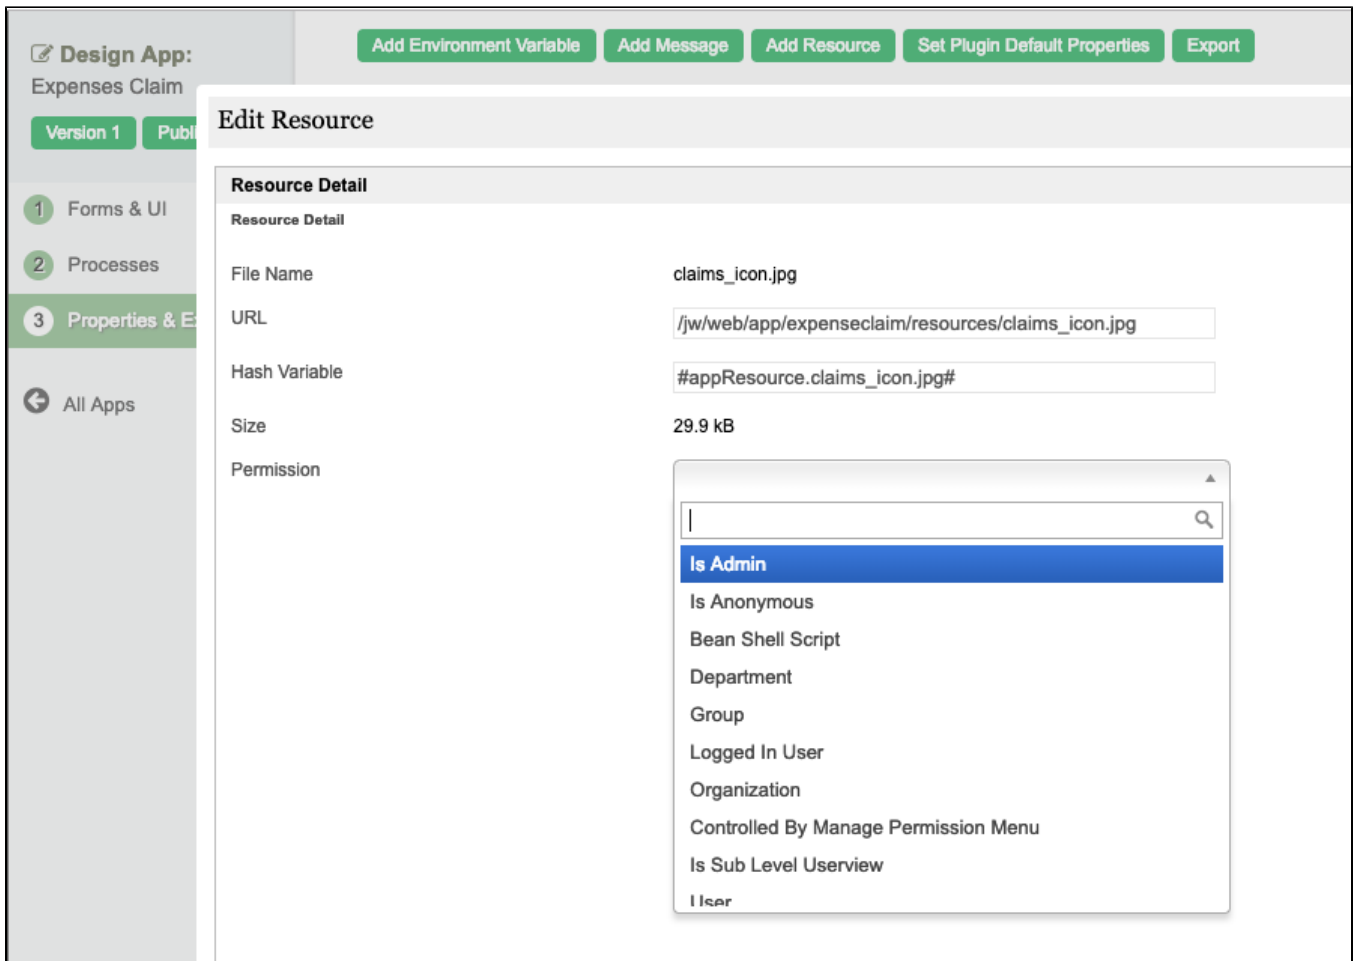

Figure 2: Properties & Export - Resources - Edit Resource

Edit Resource allows you to manage the individual resource file. You may obtain the relative URL to access the file or make use of the hash variable given within the scope of the App for convenience. The hash variable would resolve into a relative URL same as the "URL" given.

The access of the file can be managed through "Permission" attribute.
