Design Process Update via Saved XPDL Run Process

Process name: **Expense Approval Process**

```
graph TD; subgraph Client; EC[Edit Claim]; end; subgraph Approver; AC[Approve Claim]; R[Resubmit]; R1{Route 1}; end; subgraph Finance; VC[Verify Claim]; R2{Route 2}; end; subgraph System; URS[Update Record Status to Submitted]; NAR[Notify Approver Rejection]; NFW[Notify Finance Verified]; NFR[Notify Finance Rejection]; end; EC --> AC; AC --> R1; R1 -- "status=Resubmit" --> R; R --> AC; R1 -- "approved (approved)" --> VC; R1 -- "status=Rejected" --> NAR; VC --> R2; R2 -- "verified (verified)" --> NFW; R2 -- "status=Finance Rejected" --> NFR; URS --> AC; NAR --> R; NFW --> R; NFR --> R; NFR --> End(( ));
```

The **Run Process** option available at the Process tab allows the administrator/App Designer to quickly start a process instance of the current displayed process. The intended use case is to verify the process before publishing the App.
