

Hidden Field

Hidden Field is one of the generic HTML Form input elements. This element is useful for setting values in the background.

The snapshot build of the form shown below is taken from the CRM application found in Joget's installation package.

The screenshot shows a 'Proposal Form' with several fields: 'Reference No' (value: AUTO), 'Account' (dropdown: Phillip), 'Title *' (empty), 'Description' (empty), 'Attachment' (empty), and a 'Browse...' button. At the bottom, a 'status' field is visible with the value 'pending' and a 'HIDDEN FIELD' label.

Figure 1: Hidden Field

The 'Edit Hidden Field' screen shows the configuration for the hidden field. The 'ID' field is set to 'status' and the 'Value' field is set to 'pending'.
