

Options Value Formatter

Options Value Formatter allows you to transform foreign key value into its corresponding label.

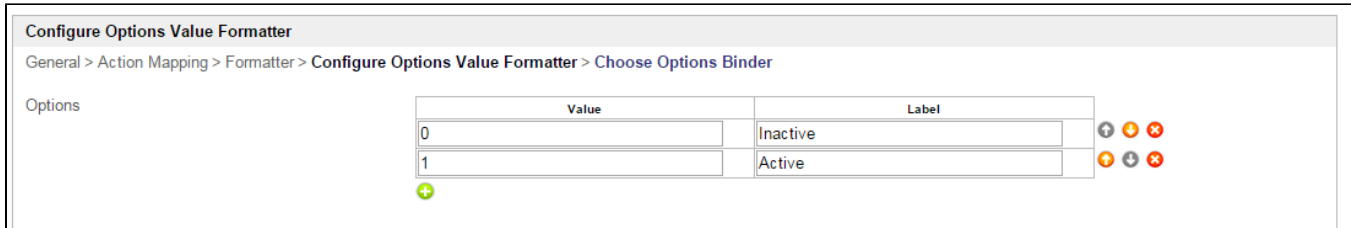

Figure 1: Options Value Formatter Properties

Name	Description
Options	Options to be populated for the column value to be matched against. Column value will be matched against "value" and "label" will be displayed to the end user.

Name	Description
Value	Option value.
Label	Option label.

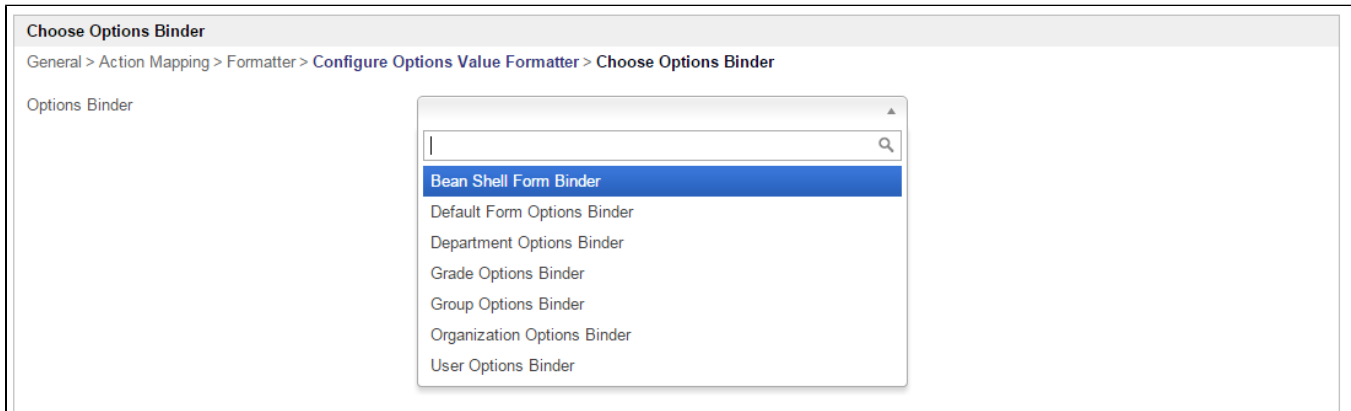

Figure 2: Options Value Formatter Properties - Choose Options Binder

Name	Description
Options Binder	Rather than using the hardcoded options in the previous tab, one may also define them by using Form Options Binder .
