

# Add jQuery Tooltip to form

1. Use the following code to incorporate jQuery Tooltip into the form. Add a Custom HTML and add in the following code. Amend accordingly.

```
<script type="text/javascript">
$(function() {

//customize your hints here by specifying form element ID on the left and message on the right
messages = { 'title' : 'Key in a suitable title',
              'remark' : 'Extra note goes here'};

//do not modify anything below here.
$( document ).tooltip({
  items: "input",
  content: function() {
    var element = $( this );
    if( messages[$(element).attr("name")] ){
      return messages[$(element).attr("name")];
    }else{
      return false;
    }
  }
});
});
</script>
```

2. The next time when someone hover over the field, the hint will show up.

The screenshot displays the 'HR Expenses Claim App' interface. On the left is a navigation sidebar with sections: 'Main' (Welcome), 'New Claim' (New Expenses Claim), and 'Personal Expenses' (Resubmission (0), Draft (0)). The main content area shows the date 'Thu, 17 Dec 2015' and the title 'Expense Claim Details'. The form includes fields for 'Ref' (AUTO), 'Title \*' (with a tooltip 'Key in a suitable title'), 'Remark', and 'Submitted By'. A note at the bottom states: 'Note: The title should appear in this format, example, Jan 06'.
