

Add a Grid

Form ID	Table Name
leaveApplication	leave_application
leaveDetails	leave_details

Relationship: One leave application has multiple leave details.

Parent Form: leaveApplication

Leave Application

Design and layout | Form properties | Preview form | Save form

Radio | Date Picker | File Upload | Sub Form | **Custom** | Grid | Custom HTML | ID Generator Field

Name *Drag This Column*

leave_details_id HIDDEN FIELD

Configuring the Grid

Property Editor

Edit Grid

Edit Grid > Choose Load Binder > Choose Store Binder

ID *

Label

Options

Value	Label	
<input type="text" value="reason"/>	<input type="text" value="Reason"/>	↑ ↓ ×
<input type="text" value="justification"/>	<input type="text" value="Justification"/>	↑ ↓ ×
+		

Read-only

Storing Data

By default, data will be stored in JSON format in the parent table.

Storing in Separate Table

Data can be stored using the **Multirow Form Binder** set as the **Store Binder** and **Load Binder**.

In the selected table, one must create a field to keep the parent ID.

Note: Every 'value' in the **Grid** properties must match their corresponding fields in the selected table.

Property Editor

Configure Multirow Form Binder

Edit Grid > Choose Load Binder > **Configure Multirow Form Binder** > Choose Store Binder

Form *

Foreign Key *

Property Editor

Configure Multirow Form Binder

Edit Grid > Choose Load Binder > Configure Multirow Form Binder > Choose Store Binder > **Configure Multirow Form Binder**

Form *

Leave Details ▾

Foreign Key *

leave_application_id

Each child record must have a unique ID as the primary key.

Table: leave_application

id	name	...
1550	David	...

Table: leave_details

id	leave_application_id	...
800	1550	...
801	1550	...
802	1550	...
