

Translation Joget French Canadian

Hi people,

As you can see, the French Canadian translation is at 97%, for some strings I would need to know more about the context to be able to translate them correctly.

Here they are:

[eplugin_fr_CA.po](#)

I put in yellow what I consider to be english errors. It's either : Use this if or Used if.... you choose.

- Used this if the group(s) that a user is belonging to, is kept in LDAP user entry. eg. groupOf
- Used this if the department(s) that a user is belonging to, is kept in LDAP user entry. eg. memberOf
- Used this if the user(s) of the group, is kept in LDAP group entry. eg. Member
- Used this if the HOD of the department, is kept in LDAP department entry. eg. Manager
- UUsed together with "Attribute Mapping - HOD" or "Attribute Mapping - Users". eg. distinguishedName
- Used this if the admin role of user(s) is kept in LDAP entry. eg. Member

- Continue on adding record

[\[JaWE_fr_CA.po](#)

[\ \](http://translate.joget.org/fr_CA/jogetworkflow3/JaWE_fr_CA.po?match_names=check-isfuzzy%2Cuntranslated&view_mode=translate)

- Insert free text expression participant
- Finish mode
- Multiple outgoing transitions without split type defined
- Multiple incoming transitions without join type defined
- Split - join mismatch in 'Full blocked' mode - more splits
- Split - join mismatch in 'Full blocked' mode - more joins
- Split - join mismatch in 'Full blocked' mode - different types
- Conditional transition for AND split in 'Full blocked' mode
- No otherwise transition for XOR split in 'Full blocked' mode
- No corresponding join activity in 'Full blocked' mode
- No corresponding join activity type in 'Full blocked' - XOR used instead of AND
- No corresponding join activity type in 'Full blocked' - AND used instead of XOR
- Improperly connected activity multiple incoming transitions
- Improperly connected activity multiple outgoing transitions
- Package and external packages dependence
- Package and external packages print view
