

Group

Definition

Group API can interact with [Group](#) and its users in the Joget built-in directory manager.

Group

- Add group
- Delete group
- Find group by username
- Unassign user from group
- Assign user to group
- Find group
- Get group by ID
- Update group

- [Add group](#)
- [Assign user to group](#)
- [Delete group](#)
- [Find group](#)
- [Find group by username](#)
- [Get group by ID](#)
- [Unassign user from group](#)
- [Update group](#)

Find group

Get all groups by default.

Able to filter or sort the returned results via parameters.

Name	Description														
URL	/group/find														
HTTP Method	GET														
Query String Parameters	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>nameFilter</td> <td>Filters the response via group ID.</td> </tr> <tr> <td>organizationId</td> <td>Filter groups that belong to an organization, via organization ID.</td> </tr> <tr> <td>sort</td> <td>Group data column to sort. Must be used in conjunction with "sortDescending" parameter.</td> </tr> <tr> <td>sortDescending</td> <td>Sort the specified "sort" parameter value in ascending or descending order. Expects a boolean value. Must be used in conjunction with "sort" parameter.</td> </tr> <tr> <td>startOffset</td> <td>Starting position of records to start query. Expects an integer.</td> </tr> <tr> <td>pageSize</td> <td>Number of results to return. Expects an integer.</td> </tr> </tbody> </table>	Parameter	Description	nameFilter	Filters the response via group ID.	organizationId	Filter groups that belong to an organization, via organization ID.	sort	Group data column to sort. Must be used in conjunction with " sortDescending " parameter.	sortDescending	Sort the specified "sort" parameter value in ascending or descending order. Expects a boolean value. Must be used in conjunction with " sort " parameter.	startOffset	Starting position of records to start query. Expects an integer.	pageSize	Number of results to return. Expects an integer.
Parameter	Description														
nameFilter	Filters the response via group ID.														
organizationId	Filter groups that belong to an organization, via organization ID.														
sort	Group data column to sort. Must be used in conjunction with " sortDescending " parameter.														
sortDescending	Sort the specified "sort" parameter value in ascending or descending order. Expects a boolean value. Must be used in conjunction with " sort " parameter.														
startOffset	Starting position of records to start query. Expects an integer.														
pageSize	Number of results to return. Expects an integer.														
Sample Response	<pre>[{ "id": "G-001", "name": "Managers", "description": "", "organization": { "id": "ORG-001" } }, { "id": "G-002", "name": "CxO", "description": "", "organization": null }, ]</pre>														

5

Find group by username

Find the group that belongs to the specified user via username.

Name	Description																
URL	/group/findByUser/{username}																
HTTP Method	GET																
Path Parameters	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>username</td> <td>Username of a Joget user.</td> </tr> </tbody> </table>	Parameter	Description	username	Username of a Joget user.												
Parameter	Description																
username	Username of a Joget user.																
Query String Parameters	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>nameFilter</td> <td>Filters the response via group ID.</td> </tr> <tr> <td>organizationId</td> <td>Filter groups that belong to an organization, via organization ID.</td> </tr> <tr> <td>inGroup</td> <td>Search for group(s) that the user belongs or does not belong to. Expects a boolean value.</td> </tr> <tr> <td>sort</td> <td>Group data column to sort. Must be used in conjunction with "sortDescending" parameter.</td> </tr> <tr> <td>sortDescending</td> <td>Sort the specified "sort" parameter value in ascending or descending order. Expects a boolean value. Must be used in conjunction with "sort" parameter.</td> </tr> <tr> <td>startOffset</td> <td>Starting position of records to start query. Expects an integer.</td> </tr> <tr> <td>pageSize</td> <td>Number of results to return. Expects an integer.</td> </tr> </tbody> </table>	Parameter	Description	nameFilter	Filters the response via group ID.	organizationId	Filter groups that belong to an organization, via organization ID.	inGroup	Search for group(s) that the user belongs or does not belong to. Expects a boolean value.	sort	Group data column to sort. Must be used in conjunction with "sortDescending" parameter.	sortDescending	Sort the specified "sort" parameter value in ascending or descending order. Expects a boolean value. Must be used in conjunction with "sort" parameter.	startOffset	Starting position of records to start query. Expects an integer.	pageSize	Number of results to return. Expects an integer.
Parameter	Description																
nameFilter	Filters the response via group ID.																
organizationId	Filter groups that belong to an organization, via organization ID.																
inGroup	Search for group(s) that the user belongs or does not belong to. Expects a boolean value.																
sort	Group data column to sort. Must be used in conjunction with "sortDescending" parameter.																
sortDescending	Sort the specified "sort" parameter value in ascending or descending order. Expects a boolean value. Must be used in conjunction with "sort" parameter.																
startOffset	Starting position of records to start query. Expects an integer.																
pageSize	Number of results to return. Expects an integer.																
Sample Response	<pre>[{ "id": "G-001", "name": "Managers", "description": "", "organization": { "id": "ORG-001" } }]</pre>																

6	Get group by ID	<p>Get details of a group via group ID.</p> <table border="1"> <thead> <tr> <th>Name</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>URL</td> <td>/group/{id}</td> </tr> <tr> <td>HTTP Method</td> <td>GET</td> </tr> <tr> <td>Path Parameters</td> <td> <table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>id</td> <td>Group ID.</td> </tr> </tbody> </table> </td> </tr> <tr> <td>Sample Response</td> <td> <pre>{ "id": "G-002", "name": "CxO", "description": "", "organization": { "id": "ORG-001" } }</pre> </td> </tr> </tbody> </table>	Name	Description	URL	/group/{id}	HTTP Method	GET	Path Parameters	<table border="1"> <thead> <tr> <th>Parameter</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>id</td> <td>Group ID.</td> </tr> </tbody> </table>	Parameter	Description	id	Group ID.	Sample Response	<pre>{ "id": "G-002", "name": "CxO", "description": "", "organization": { "id": "ORG-001" } }</pre>		
Name	Description
