Design Process Update via Saved XPDL Run Process

Process name: **Expense Approval Process**

```
graph TD; subgraph Client; Start(( )) --> EditClaim[Edit Claim]; EditClaim --> UpdateRecord[Update Record Status to Submitted]; UpdateRecord --> Resubmit[Resubmit]; Resubmit --> ApproveClaim[Approve Claim]; Resubmit --> ApproveClaim; end; subgraph Approver; ApproveClaim --> Rule1{Rule 1}; end; subgraph Finance; Rule1 -- "approved (approved)" --> VerifyClaim[Verify Claim]; Rule1 -- "status=Rejected" --> NotifyApp[Notify Approver Rejection]; VerifyClaim --> Rule2{Rule 2}; Rule2 -- "verified (verified)" --> NotifyFin[Notify Finance Verified]; Rule2 -- "status=Finance Rejected" --> NotifyFinRej[Notify Finance Rejection]; end; subgraph System; NotifyApp --> End1(( )); NotifyFin --> End2(( )); NotifyFinRej --> End3(( )); end;
```

The **Run Process** option available at the Process tab allows the administrator/App Designer to quickly start a process instance of the current displayed process. The intended use case is to verify the process before publishing the App.
