

# Subform Repeater Plugin

- [Introduction](#)
- [Download Plugin](#)
- [Download Demo App](#)

## Introduction

The **Subform Repeater Plugin** is a great alternative for the enterprise "Form Grid" field element.

The Subform Repeater Plugin allows you to design a form and add a subform that is repeated (as in multiple rows) to display child records and at the same time open a new top or bottom row for data entry. Subform Repeater Plugin does not pop up a new browser window "Form Grid" style.

The Subform Repeater is very flexible as it allows you to configure many options (load and save datasource, validations, subform appearance etc.).

## Download Plugin

- For Joget v6 & DX Enterprise & Professional editions: [https://marketplace.joget.org/jw/web/userview/mp/mpp/\\_/vad?id=Subform\\_Repeater](https://marketplace.joget.org/jw/web/userview/mp/mpp/_/vad?id=Subform_Repeater)

## Download Demo App

- [APP\\_subform\\_repeater\\_file\\_image\\_upload\\_kb.jwa](#)  
App includes the latest **subform\_repeater-7.0.1.jar plugin**. Uploaded on 07-Sept-2020.
