

Developing Plugins

What is a Plugin?

Plugins are software extensions that add capabilities to an app.

Joget Workflow plugins -

- allow the functionality of the system to be extended dynamically.
- bring about extensibility and adaptability of product features.

Any kind of integration that is not yet available in Joget Workflow as a standard feature can be accomplished by developing a plugin, without breaking the fundamental core of the product.

Joget Workflow plugin architecture supports 2 types of plugin structures:

- Standard Java Plugin
- Dynamic OSGi Plugin
