Overview

Joget is an open source no-code/low-code application platform for faster, simpler digital transformation. Joget combines the best of business process automation, workflow management and rapid application development in a simple, flexible and open platform. Visual and web-based, it empowers non-coders to instantly build and maintain apps anytime, anywhere. Joget makes it easy to empower business users, non-coders or coders to create enterprise applications for customer management, operational excellence, business process management and administration. Every organization demands easy to build and adaptable applications, and Joget enables those application delivery goals with a low total cost of ownership. With more than 2,000 installations and 10,000 community users worldwide across various industries (including finance, manufacturing, IT, and more), Joget is a proven platform for a wide spectrum of organizations ranging from Fortune 500 companies to government agencies and small businesses. Joget DX combines the best of business process automation, workflow management and low-code application development in a simple, flexible and open platform. Business and technical teams can collaborate to rapidly build full-fledged enterprise applications visually, anywhere, anytime.

Category: [CRM](#), [Developer tools](#)
Version: default-version
Operating System: Ubuntu Server 18.04
Add to Private Catalog: [Deployment .zip file](#)

If you have a Google Cloud Platform (GCP) account and would like to try Joget, you can launch it from [Google Cloud Marketplace](#).

The image comes with Joget DX Enterprise Edition and 10 users license.

If you want to patch your Joget DX to a certain version, you need to [re-request your Joget DX license](#) once it is done.

And if you wish to increase your user license, you may purchase it from this [link](#).

1. Once you launch the instance, wait for a few minutes to allow the application to start up, then you can proceed to access Joget via `http://[public_ip]:8080/jw` using your browser. Please ensure the Firewall accepts TCP port 8080 inbound traffic.
2. Default Joget administrator login is "admin".
3. The default password for admin is the VM Instance Id. You can get that by logging in into your GCP console, and select the Joget VM instance that you launched from GCP Marketplace. You can find the Instance Id under VM instance details.
4. Once logged in, it is recommended to change your admin password immediately.
5. The image comes with MariaDB as a database server. Default root password for MariaDB is "root". Additional database user was created for Joget, and the account is "joget", password is "joget". If you wish to change the database login settings for Joget, you may refer to [Changing Default Datasource Settings](#)
