Version 7.0.8

Bug Fixes and Improvements

All Editions

```
[ MODIFIED ]     APP        : Adding #request.domainURL# to support shorthand syntax to construct URL without
context path.

[ FIXED ]        APP        : Hash Variable with "/" char cannot parsed correctly.

[ MODIFIED ]     APP        : Adding #request.baseURL# to support shorthand syntax to construct URL.

[ FIXED ]        APP        : GetDefaultPropertyValues implementation causing Multi Paged Form page properties
                             does not load default value.

[ FIXED ]        FORM       : Form fields with same id in permission/visibility controlled section does not work
correctly.

[ FIXED ]        APP        : Date modified is incorrect and uses the date created instead when an app is
imported or exported

[ FIXED ]        APP        : Regression of Date column format type to support "UTC" format to display based on
user timezone

                             and locale format.
