

How to start multiple subflows based on multiple list selection

Hi all,

can anyone assist me ?

here is the issue I cant solve:

I would like to have automatic creation of sub flows after a multiple selection of checkboxes.

Like that:

lets say I have sub flow name CONTRACTOR_SALES_LEADS

and when I have a sales lead, I would like to chose a few contractors (2 or more) by checkboxes, and after pressing a button, multiple instances of CONTRACTOR_SALES_LEADS sub flows must appear , each one per selected contractor (the checkboxes).

I assume I have to pass for each sub flow a variable like contractor_name according to the selected checkbox, but how to automate it ?

Any help is more then welcome,

John
