

# Userview Permission Control

Permission control can be applied at the **Userview** itself or at **Userview Category** level in the Userview using the [Permission Control](#) feature.

The screenshot shows the 'USERVIEW BUILDER' interface. At the top, there is a navigation bar with four tabs: 'Design Userview' (Design Your Menu), 'Settings' (Theme & Permission), 'Preview' (Preview Userview), and 'Save' (Save Userview). The 'Settings' tab is currently selected. Below the navigation bar, the main section is titled 'Configure Permission'. It shows a breadcrumb trail: 'Configure Layout > Theme (Enterprise Theme) > **Configure Permission** > Login Page UI > Mobile Options'. Under the 'Configure Permission' heading, there is a label 'Permission Type' followed by a dropdown menu. The dropdown menu is open, displaying a list of permission types: 'Is Admin', 'Is Anonymous', 'Bean Shell Script', 'Department', 'Group', 'Logged In User', 'Organization', 'Is Sub Level Userview', and 'User'. The 'Is Admin' option is currently selected and highlighted in blue.

Permission Control elements available:-

- [Bean Shell Permission](#)
