

Simultaneous Internal and External Directory Managers

Joget simplifies the management of users. It allows users from the internal local directory as well as the directory managers such as Active Directory to be used.

Apart from the LDAP plugin, the Security Enhanced Directory Manager can also be used to retrieve users from AD. To configure simultaneous use of directories (i.e both internal and external),

Go to **System Settings > Directory Manager Settings > Configure Plugin(Security Enhanced Directory Manager) > External Directory Manager**

The screenshot displays the Joget System Settings interface. On the left, a sidebar contains the following menu items: **System Settings** (with a gear icon), **General Settings** (with a gear icon), **Datasource & Profile Settings** (with a database icon), **Directory Manager Settings** (with a group of people icon and highlighted with a red box), **Manage Plugins** (with a plug icon), and **Manage Messages** (with a speech bubble icon). The main content area is titled **DirectoryManager Implementation** and contains the following information:

- Current Plugin Class Name:** org.joget.plugin.directory.SecureDirectoryManager
- Current Plugin Name:** Security Enhanced Directory Manager
- Two buttons: **Remove Plugin** and **Configure Plugin** (the latter is highlighted with a red box).
- Select Plugin:** LDAP Directory Manager - 5.0.0 (with a dropdown arrow)
- A **Select** button.

At the bottom of the interface is a dark navigation bar with icons for **All Apps**, **Users**, **Monitor**, and **Settings** (the latter is highlighted with a red box). To the right of the **Settings** icon, a status bar displays: **Memory Used: 387 / 510 MB; Datasource Active: 0, Idle: 1**. Red arrows indicate the navigation path from the **Settings** icon in the footer to the **Directory Manager Settings** menu item, and from that menu item to the **Configure Plugin** button.

PLUGIN CONFIGURATION

External Directory Manager

General > Default Directory Password Policy > Notification > External Directory Manager

External

LDAP Directory Manager

Sync LDAP User Directory Manager
