

Arrange Radio Buttons Inline

The following CSS code can be used, in a [Custom HTML](#) element to style the radio button selections to become inline.

The image shows a web browser window with a form titled "Account". The form has three fields: "Name" (John Smith), "Year" (2021), and "Satisfaction". The "Satisfaction" field contains five radio buttons: "Highly Dissatisfied", "Dissatisfied", "Neither Satisfied nor Dissatisfied", "Satisfied", and "Highly Satisfied". The "before" state shows the radio buttons arranged in two columns. The "after" state shows the radio buttons arranged in a single row. The "after" state also includes a "More" section with a "Photo" field and a "Drop files here or click to upload." message. The browser address bar shows "eb/userview/account/v/_/req_crud?_mode=add".

Figure 1: Radio Buttons Inline

```
<style>
  div[id*='satisfaction'] label {
    width: unset;
    padding: 10px;
  }
</style>
```

Replace "satisfaction" in the code above with your radio's field ID.
