

Popup Select Box

Popup Select Box is an enhancement of the ordinary [SelectBox](#). Instead of selecting from a generic drop-down list, the **Popup Select Box** allows you to select from a [Datalist](#) instead.

The screenshot displays the 'CRM: Sales Force Automation' web application. The header includes the title 'CRM: Sales Force Automation' and a 'Logout' link. The left sidebar contains navigation links: 'Home', 'Welcome', 'Accounts', 'Account List (5)', 'New Account', 'Contacts', 'Contact List (0)', and 'New Contact'. The main content area is titled 'Contact Details' and contains a form for creating a new contact. The 'Account' field is highlighted with a 'Popup Select Box' that shows a 'Select' button. Other fields include 'Full Name *', 'Last Name', 'Address Available' (with a 'No' dropdown), and 'Photo' (with a 'Browse...' button).

Figure 7: URL Request Parameters for Datalist - Configuration

In the example above, we are using the value of hidden field with id "country_default" to the Datalist with a parameter named as "country". If there's no value set in the hidden field, then it will use with default value of "local".

Figure 8: URL Request Parameters for Datalist - Datalist Builder

On the other hand, one will need able to utilize the parameter value being passed over from the Popup Selectbox. In the Datalist's binder, we are using the following expression to filter the dataset.

Extra Filter Condition Expression

e.customProperties.country = '#requestParam.country#'
