Export

The **Export** option allows one to export out the entire app design into a single file. This is useful when one is performing backup or transferring the app into other server.

> ⓘ **App Data not included**
>
> Application data will not be part of the export, only the app design.

Figure 1: Screenshot highlighting Export button in the sample HR Expenses Claim app

A file **.jwa** extension will be generated. You can now take the file to other Joget server and Import it in.
