Usages

- Used to extend ways of searching the data listing. (Eg. Filter record using Drop down list). Please refer to [Datalist Builder - Filter](#).
- A useable Datalist Filter Type plugin must extends [org.joget.apps.datalist.model.DataListFilterTypeDefault](#) abstract class.

Abstract Class

org.joget.apps.datalist.model.DataListFilterTypeDefault

- Under wflow-core module
- Extended [org.joget.plugin.base.ExtDefaultPlugin](#). Please refer to [Plugin Base Abstract Class and Interface](#).
- Implemented [org.joget.plugin.property.model.PropertyEditable](#). Please refer to [Plugin Base Abstract Class and Interface](#).
- A base abstract class to develop a Datalist Filter Type plugin.

Method Detail

Abstract Methods

[getTemplate](#)

```
public java.lang.String getTemplate(org.joget.apps.datalist.model.DataList datalist, java.lang.String name, java.lang.String label)
```

HTML template of the filter.

[getQueryObject](#)

```
public org.joget.apps.datalist.model.DataListFilterQueryObject getQueryObject(org.joget.apps.datalist.model.DataList datalist, java.lang.String name)
```

Condition and parameters to construct query.

Utility Methods

[getValue](#)

```
public java.lang.String getValue(org.joget.apps.datalist.model.DataList datalist, java.lang.String name)
```

Convenience method to get value from request parameters.

[getValue](#)

```
public java.lang.String getValue(org.joget.apps.datalist.model.DataList datalist, java.lang.String name, java.lang.String defaultValue)
```

Convenience method to get value from request parameters.

Return default value if empty

[getValues](#)

```
public java.lang.String[] getValues(org.joget.apps.datalist.model.DataList datalist, java.lang.String name)
```

Convenience method to get values from request parameters.

getValues

```
public java.lang.String[] getValues(org.joget.apps.datalist.model.DataList datalist, java.lang.String name,  
java.lang.String defaultValue)
```

Convenience method to get values from request parameters.

Return default values if empty. default values can be separated by semicolon ";" if multiple value.

Plugin Properties Options

- Please refer to [Plugin Properties Options](#) for more information.

Datalist Filter Type Plugin Template Sample

Following is a sample template of a [Text Field Filter Type](#). It is constructed using [FreeMaker](#) syntax. This template will be used and returned by [getTemplate](#) method.

```
public String getTemplate(DataList datalist, String name, String label) {  
    PluginManager pluginManager = (PluginManager) AppUtil.getApplicationContext().getBean("pluginManager");  
    Map dataModel = new HashMap();  
    dataModel.put("name", datalist.getDataListEncodedParamName(DataList.PARAMETER_FILTER_PREFIX+name));  
    dataModel.put("label", label);  
    dataModel.put("value", getValue(datalist, name, getPropertyString("defaultValue")));  
    dataModel.put("contextPath", WorkflowUtil.getHttpServletRequest().getContextPath());  
    return pluginManager.getPluginFreeMarkerTemplate(dataModel, getClassName(), "/templates  
/textFieldDataListFilterType.ftl", null);  
}
```

```
<script type="text/javascript" src="${contextPath}/plugin/org.joget.apps.datalist.lib.  
TextFieldDataListFilterType/js/jquery.placeholder.min.js"></script>  
<input id="${name!}" name="${name!}" type="text" size="10" value="${value!}?html}" placeholder="${label!}?html}" />  
<script type="text/javascript">  
    $(document).ready(function(){  
        $('#${name!}').placeholder();  
    });  
</script>
```

Explanations

- There are no specific format needs to follow.
- Please make sure that the filter input name is the value get from `datalist.getDataListEncodedParamName(DataList.PARAMETER_FILTER_PREFIX+name)`.
