[Remove Mapping]

☐ Remove Save as Draft Button

☑ Show The Next Assignment When Completed

Run Process
ID : runProcess

Form Name   HR Expense New Claim Form

[Remove Mapping]

☑ Show The Next Assignment When Completed

Figure 1: Map Activities to Forms

In this section, one would be required to map the **Activity** to its corresponding **Form**.

Activity will be associated with the selected form and the form chosen will be shown to the participant user throughout the process flow. Form associated should be relevant with the purpose of the process flow and tightly coupled such that it would be critical to determine the course of flow of the process flow.

> (i) **Show The Next Assignment When Completed**
>
> **Show The Next Assignment When Completed** option enables one to quickly redirected to the next assignment when one finishes with the current one provided that there's subsequent assignment for the same user immediately after completion of the current one.

Create New Form

Map to a Form

Each activity would be mapped to a Joget Workflow Form Builder's Form.

Map to External Form

One may also point an activity to an externally hosted form by specifying the specific URL path. Read more at External Form.

Run Process

Run Process is a special activity which can also be mapped to a form. A User will see this form before the actual start of the process. The process will only start after the user submits the form. This is particularly useful to reduce unnecessary creation of process instances.
