Introduction

This [form load binder](#) plugin allows you to load data about a scheduled transaction on the Hedera DLT into a form. This plugin can be used at the form level or at the form section level.

Plugin Properties

Configure Hedera Scheduled Transaction Load Binder

Name	Description
Operator ID	See Hedera Default Backend Configuration .
Operator Key	
Network Type	
Schedule ID	Schedule ID of the scheduled transaction to load data for. Typically a Hash Variable is used here.

Map Value To Form Fields

Name	Description
Scheduled Transaction ID	The transaction ID of this scheduled transaction.
Transaction Signatories	The current state of who has signed this transaction.
Transaction Memo	A note or description that was set for this transaction (maximum length of 100 characters).
Creator Account ID	The Hedera account that created this scheduled transaction.
Payer Account ID	The Hedera account paying for the execution of this scheduled transaction.
Transaction Expiration Time	The date and time when this scheduled transaction will expire.
Transaction Execution Time	The date and time when this scheduled transaction was executed. If this scheduled transaction has not executed yet, this field will be empty.
Transaction Deletion Time	The date and time when this scheduled transaction was deleted. If this scheduled transaction is not deleted, this field will be empty.
