

Running Processes

Introduction

Running Processes is where all running processes (of all applications) in the system are listed. A process is "running" when it has been selected to be carried out or executed.

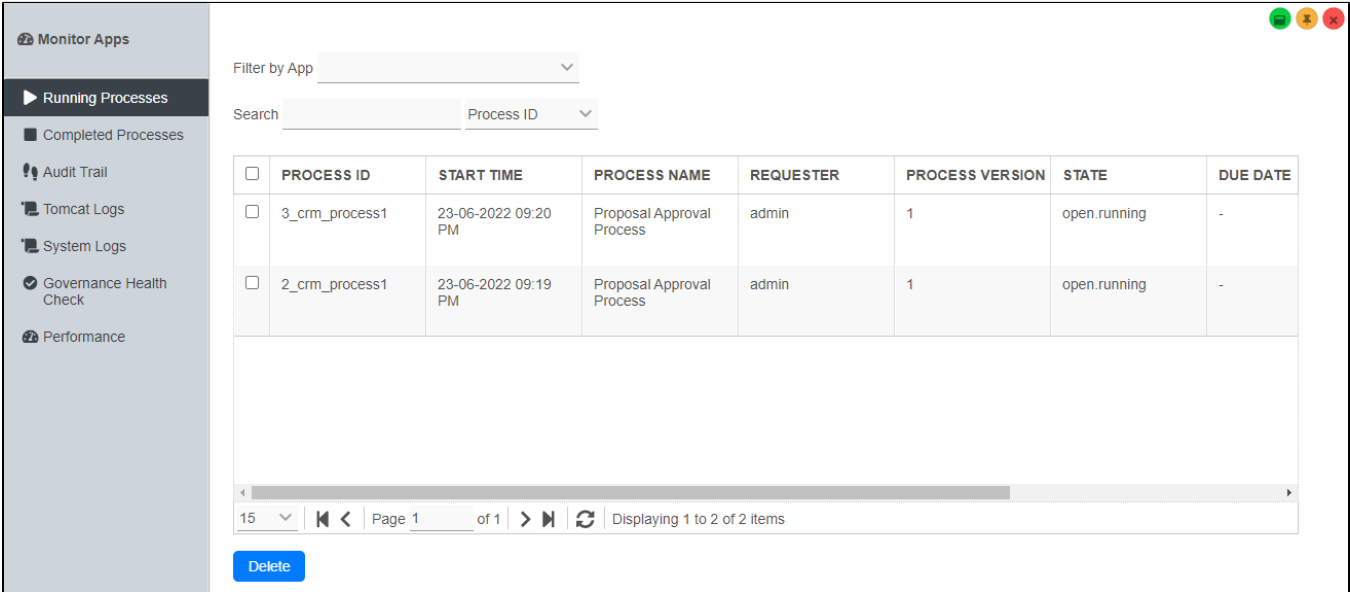

Figure 1 shows the list of running processes in the system that administrators would be able to see. Selecting a process instance will show its details as well as administrative controls. One may click into a particular process instance to view its information. (See [Running Process Instance](#))

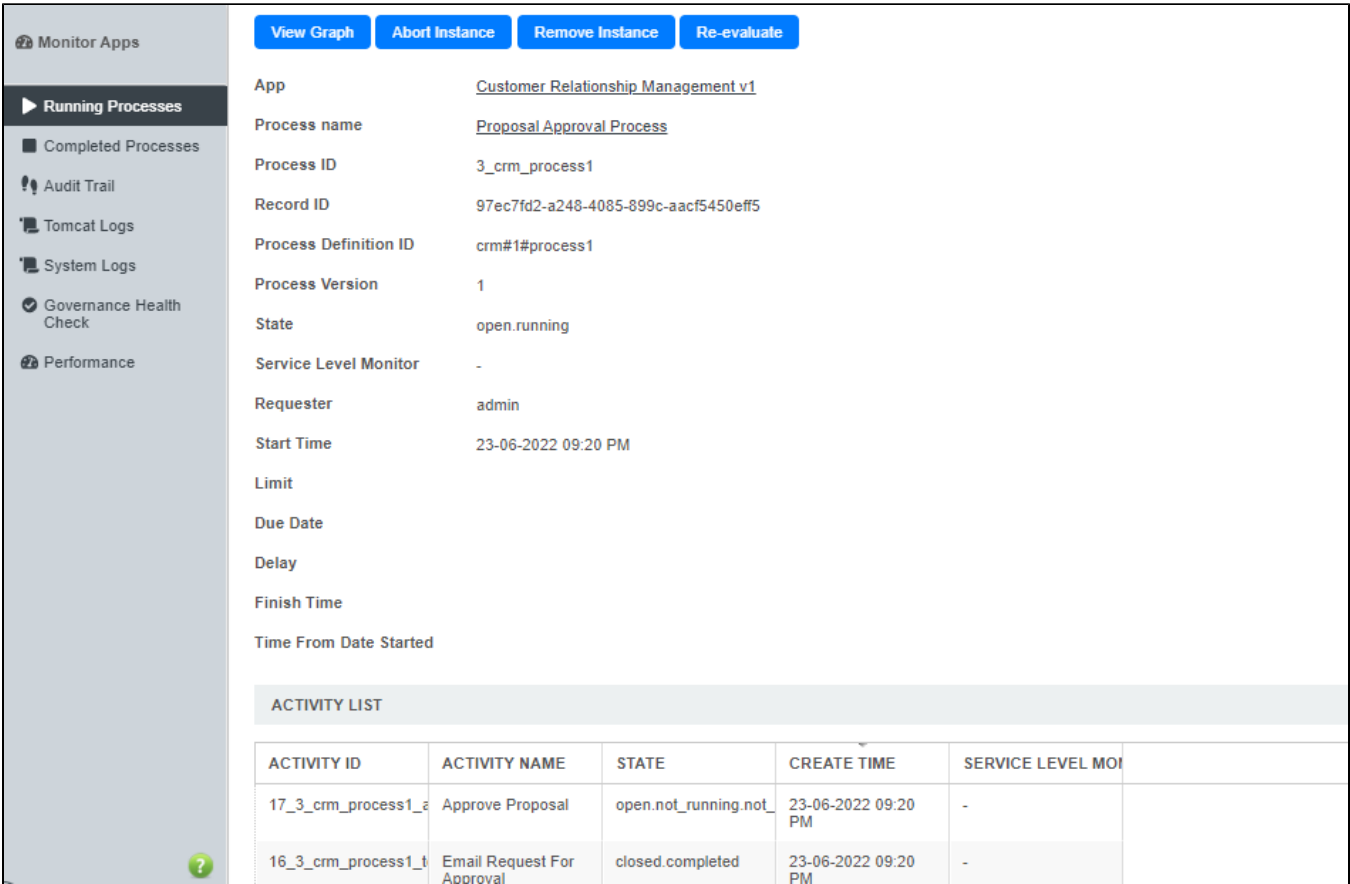

Figure 2 shows the process information and past & current activities. Clicking on the activity name (bottom of screen in Activity List) will display the activity instance details.
