☐ Use AJAX for Cascade Options?

Name	Description
Select Organization	Refine the selections by selecting an organization.
Select Department	Refine the selections by selecting a department.
Select Group	Refine the selections by selecting a group.
Add Empty Option	If checked, an empty option will be added to the selections.
Empty Option Label	Empty option label. Only in use when Add Empty Option is checked.
Label	<ul style="list-style-type: none">• Full Name with Username• Username• Full Name

Grouping by	<ul style="list-style-type: none">• None• Organization• Department• Grade
Use AJAX for cascade options?	<p>When checked, this allows these fields to dynamically load available options based on the other field value (grouping column) when dealing with a tremendous amount of selections. Read more at Ajax Cascading Drop-Down List.</p> <div> Not applicable to Form Data Store. Only available when used as an Options Data Store.</div>

Form Options Caching

 **FORM OPTIONS CACHING**

Sync Cache Interval ?

3600

Pause sync after idle * ?

Name	Description
Sync Cache Interval	<p>How often to activate cache synchronization (in seconds).</p> <p>For example, when set to 180 seconds, background synchronization in the server will take place every 180 seconds to refresh with the new/latest data.</p>
Pause sync after idle	<p>How long to wait to pause synchronization after idle.</p>

 **Tip**

This may be used in conjunction with [User Options](#) to return all the users into a dropdown selection. If the user records are large (in the tens of thousands), it is recommended to set "Pause sync after idle" to a larger value and the sync will continue to update the cache in the background. If the dropdown selections are unlikely to change in a very short interval, it is recommended to set the "Sync Cache Interval" to a larger value too so that the server does not perform a new cache again in a short span of time.
