Font Size ?

Font Color Code ?

Name	Description
Formatting	Check if appropriate to style the column value.

Font Size	Font size in character. <div><div>Example</div><div>14px</div></div>
Font Color Code	Font color code in character. <div><div>Example</div><div>#ff0000</div></div> <div><div>Example</div><div>red</div></div>

Configure Foreign Key

In this tab, when configured, the current column value will act as a foreign key value and will be used to retrieve a field value from other form data table.

 **CONFIGURE FOREIGN KEY**

Form

▼

Field ID

▼

Name	Description
Form	Target form to retrieve the value from.

Field ID

Field ID of the select field to retrieve the value from.

Example

The **current column value** holds the **category ID**.

There is a separate form called "Category" that holds all the categories.

Category form table scheme:

Name
id
name
description

By specifying "**name**" here, the category name will be returned.
