Introduction

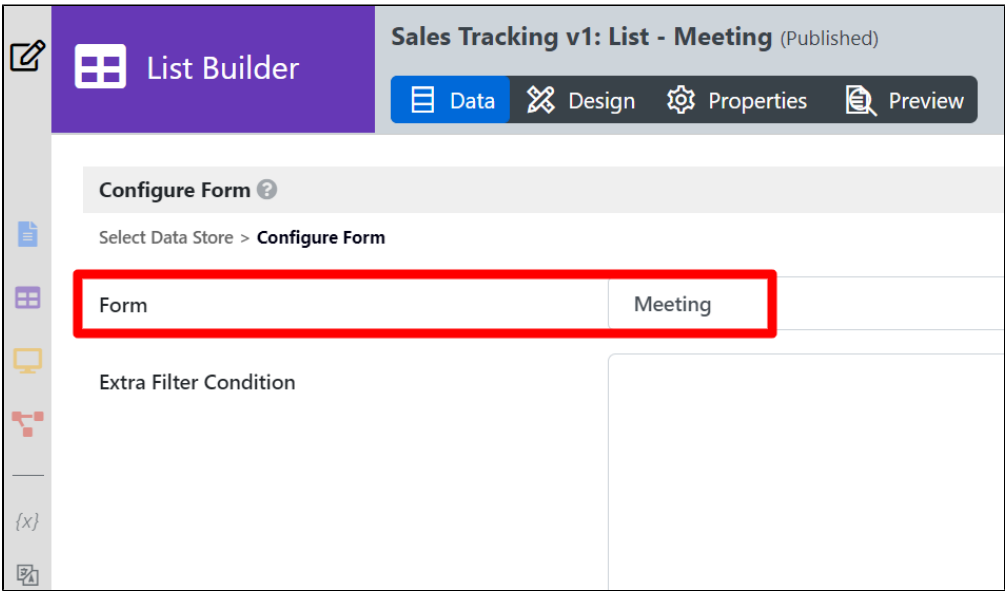

Form Data List Data Store is the default data store used to return data from submitted forms.

Form Data List Data Store Properties

Click on **Data** and select **Form Data**.

Select the **Form** you wish to use.

| Name | Description |
|-------|---|
| Form | Source form to retrieve data from. |
| Extra | Additional condition(s) for filtering the data set. HQL is expected here. |

Syntax Query

Start your filter name with **e.customProperties**, followed by the field id (i.e. **username**)

| Meeting Date | Meeting Time | Lead | Team Member Type | Team Member |
|--------------|--------------|----------------|------------------|---------------------------------|
| 07-23 | 14:00 | Survey Project | Pre-sales, Sales | Carol Chew, James Tan, Mike Lee |
| 07-23 | 14:00 | Survey Project | Pre-sales, Sales | Carol Chew, James Tan, Mike Lee |
| 07-23 | 14:00 | Survey Project | Pre-sales, Sales | Carol Chew, James Tan, Mike Lee |
| 07-23 | 14:00 | Survey Project | Pre-sales, Sales | Carol Chew, James Tan, Mike Lee |
| 07-23 | 14:00 | Survey Project | Pre-sales, Sales | Carol Chew, James Tan, Mike Lee |

HQL is accepted

You may even use operator such as "LIKE" to narrow down your data set.

List Builder Sales Tracking v1: List - Meeting (Published)

Configure Form ?

Select Data Store > Configure Form

Form: Meeting

Extra Filter Condition: **e.customProperties.title LIKE '%Lead%'**

Sample

```
e.customProperties.title = 'Trip'
```

A hash variable is accepted here.

Sample

```
e.customProperties.submitted_by = '#currentUser.id#'
```

Userview Key can be used as part of the condition.

Sample

```
e.customProperties.category_id = '#userviewKey#'
```
