Introduction

Joget for Google Apps is a cloud platform to easily build web apps and automate processes. Seamlessly integrated with [G Suite](#), a user can visually design their own custom applications, or download ready made apps from the Joget Marketplace.

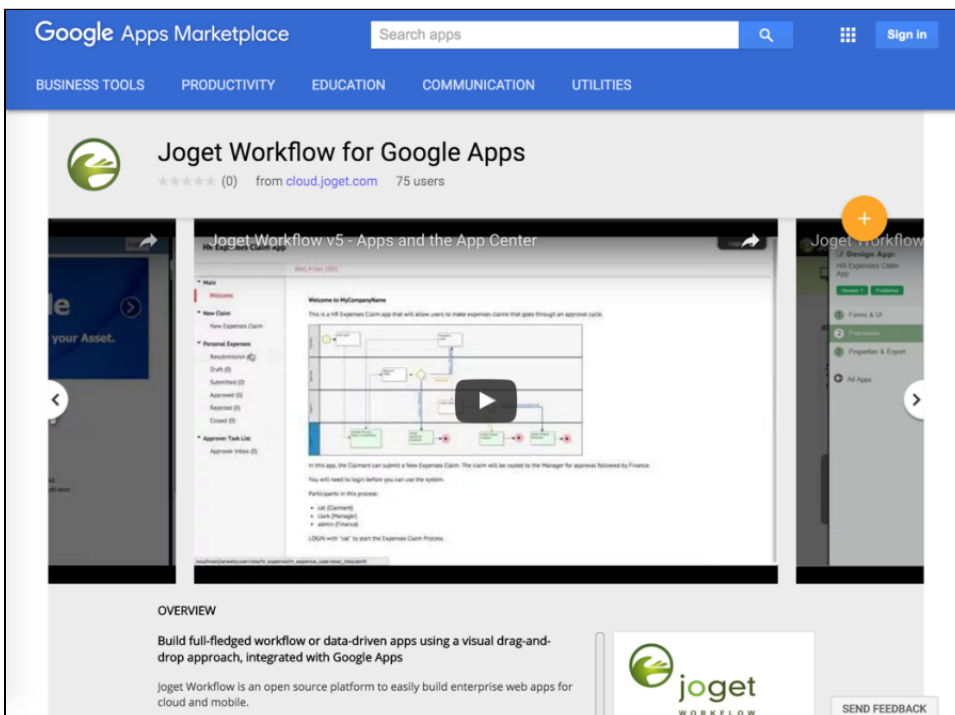

G Suite is the popular suite of productivity software offered by Google. Comprising its popular tools like Gmail, Calendar, Drive, etc, it offers users great collaboration features over the cloud.

Sometimes though, collaboration tools aren't enough. Organizations would require custom software or apps that solve specific business problems. That's where Joget for Google Apps fits in.

Installing Joget for Google Apps

To install Joget for your Google Apps domain with single sign-on (SSO), just follow the steps below:

1. Visit the [Joget for Google Apps](#) page in the [G Suite Marketplace](#).

2. If you haven't logged in yet, you will be prompted to login. Login using your G Suite **domain administrator email**.

3. In the next permission page, tick on the checkbox and click on **Accept**.

4. At this point, Joget for Google Apps has been installed. You will be prompted to optionally notify all the domain users.

5. To complete the setup, click on the **"Complete additional setup now"** link.

6. Fill in your contact details and click on **Submit**. This will immediately create the Joget account for your G Suite domain.

8. You can login to the Joget installation using the "Sign in with Google" button, or using the default admin user account credentials.

9. The Joget for Google Apps icon will also appear in the app launcher at the top right of the G Suite header for all your domain users.

Configuring G Suite Users and Groups

By default, G Suite users will have their Joget user automatically created the first time they single-sign on (SSO) into the Joget installation.

It is also possible to configure the Joget installation to automatically sync all the users and groups from the G Suite domain. To do so, follow the steps below:

1. Login to Joget as an administrator

2. Go to **Settings > Directory Manager**, and click on **Configure Plugin** for the Google Directory Manager

3. In the Plugin Configuration, click on the Advanced tab, fill up the following required information and click on Submit

Google Apps Domain	Your G Suite domain e.g. mydomain.com
Google Apps Admin Email	The G Suite domain administrator email e.g. admin@mydomain.com
Joget Admin Users	The list of usernames who will have Joget administrator access (separated by commas e.g. admin, demo)
Fallback Admin Username	The username to login as an administrator in case of misconfiguration
Fallback Admin Password	The password to login as an administrator in case of misconfiguration

4. If the configuration is valid, the users and groups in Joget will automatically be retrieved directly from the G Suite domain.
