

Single-Page Application - SPA

New feature

This is a new feature in **Joget DX 8**

Joget DX already supports automatic Progressive Web Apps (PWA) compliance by default.

To further improve the end-user experience, there will now be built-in support for Single-Page Applications (SPA).

SPA displays page content dynamically using JavaScript without reloading the entire page, so its main advantage is speed and UI responsiveness.

Building PWAs and SPAs using traditional development methods is not trivial, but Joget DX 8 will make it a matter of drag-and-drop.
