New Feature

This is a new feature in Joget DX 8.

Introduction

The **Styles** tab in the property editor is a new feature in DX8 that enables refined control of how an element (whether form element, list column or UI page component) would be viewed on either Desktop, Tablet or Mobile.

The styles editor allows one to modify an element's CSS styling without the need to write CSS code (unless one uses the custom styling, more on this [below](#))

Form Builder

The style tab in the Form Builder, allows one to control how a page component is viewed by modifying an element's default style and the component's style component when it is hovered over by a cursor. There is also the option to specify which CSS classes should the element get its style from and the option to modify the position of the element's label.

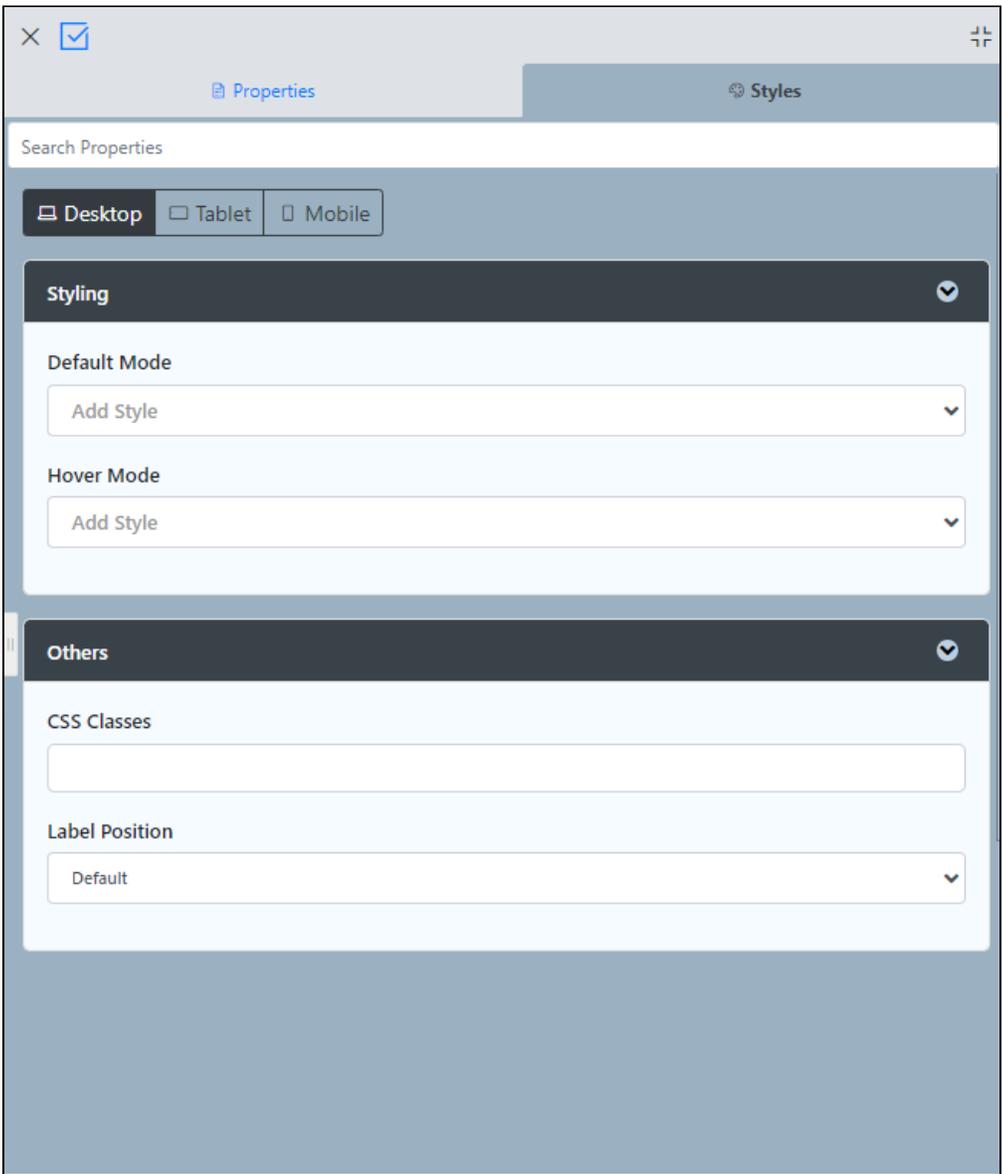

Figure 1: Styles - Form Builder

List Builder

In the List Builder, the styles tab allows the user to control the styling of the list in 2 ways, modifying the list's body styling and its header styling.

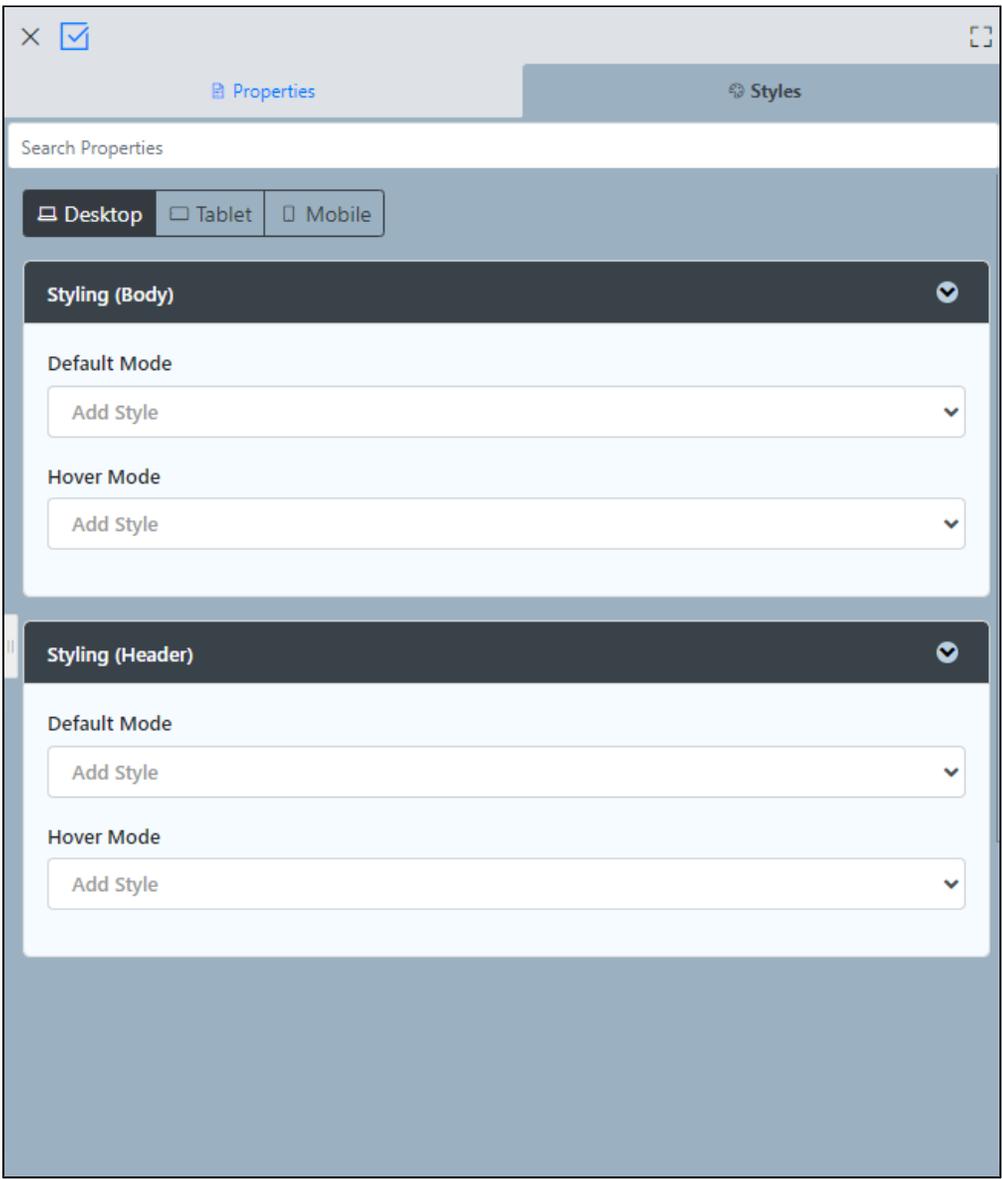

Figure 2: Styles - List Builder

UI Builder

Similarly to the Form Builder, The styles tab in the UI builder allows one to control how a page component is viewed by modifying the element's default style and the component's style when it is hovered over by a cursor.

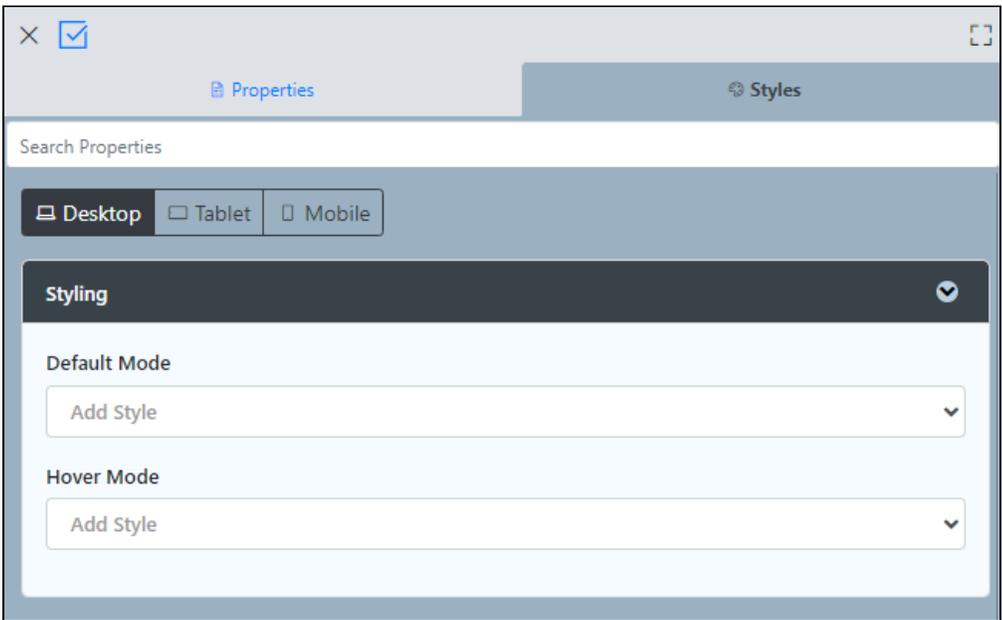

Figure 3: Styles - UI Builder

Styling Modes

There are 8 possible styling options available across the Form, List and UI builders. These can be accessed under the styling configurations in the property editor .

Device Styling

You can utilise the styles editor to change how an element is styled for multiple device types from the same configuration screen. The images below show how a text field form element is styled for Desktop and Mobile devices through the same property editor menu.

Name	Description
Border Style	Select the element's border style.
Border Color	Enter the element's color as a hex code or use the color picker to select the desired color
Border Top Width	Enter the element's top border width in em, px, percentage, rem or auto size.
Border Left Width	Enter the element's left border width in em, px, percentage, rem or auto size.
Border Right Width	Enter the element's right border width in em, px, percentage, rem or auto size.
Border Bottom Width	Enter the element's bottom border width in em, px, percentage, rem or auto size.
Border Radius	Enter the element's border radius in em, px, percentage, rem or auto size.

Display

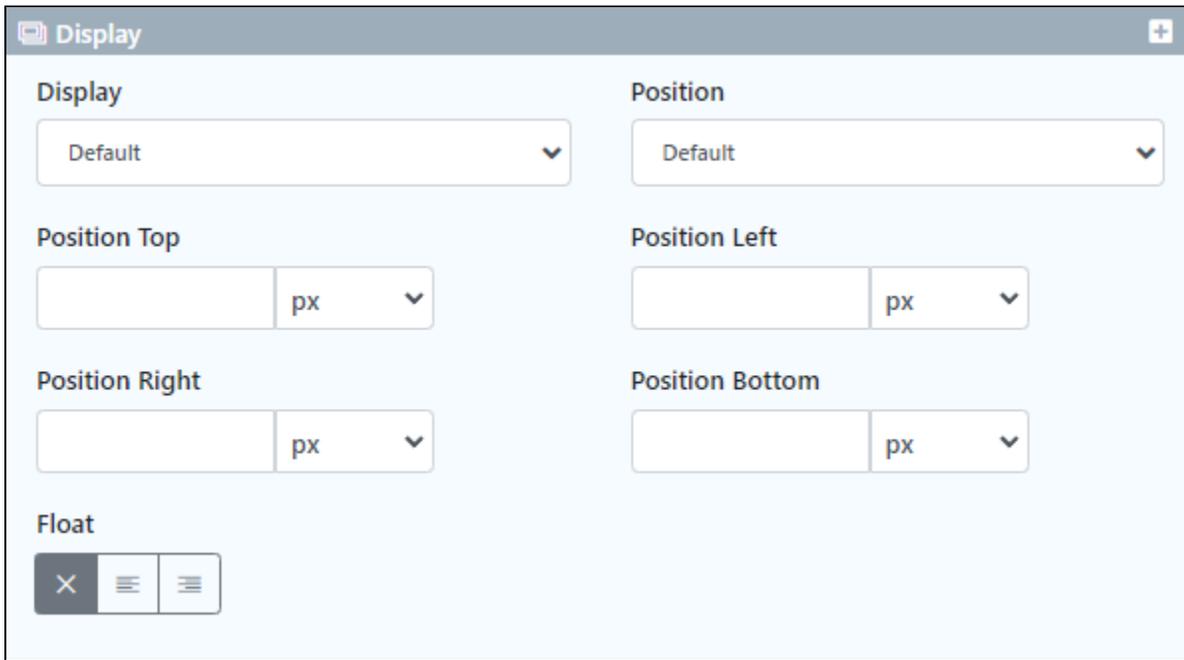

Figure 11: Styles - Display

Name	Description
Display	Select the element's display style. Available options are: <ul style="list-style-type: none"> • Default • Block • Inline • Inline Block • None
Position	Select the element's positioning type. Available options are: <ul style="list-style-type: none"> • Static • Fixed • Relative • Absolute
Position Top	Enter the element's top positioning within the canvas in em, px, percentage, rem or auto size.
Position Left	Enter the element's left positioning within the canvas in em, px, percentage, rem or auto size.
Position Right	Enter the element's right positioning within the canvas in em, px, percentage, rem or auto size.
Position Bottom	Enter the element's bottom positioning within the canvas in em, px, percentage, rem or auto size.
Float	Choose the element's positioning alignment. Available options are: <ul style="list-style-type: none"> • None • Position Left • Position Right

Size

Figure 12: Styles - Size

Name	Description
Width	Enter the element's desired width in em, px, percentage, rem or auto size.
Height	Enter the element's desired height in em, px, percentage, rem or auto size.
Min Width	Enter the element's minimum width in em, px, percentage, rem or auto size.
Min Height	Enter the element's minimum height in em, px, percentage, rem or auto size.
Max Width	Enter the element's maximum width in em, px, percentage, rem or auto size.
Max Height	Enter the element's maximum height in em, px, percentage, rem or auto size.

Custom

Figure 13: Styles - Custom

The Custom Styling option allows you to write custom CSS code that will determine the element's styling.
