Use AJAX for cascade options?

☐

Figure 1: Bean Shell Form Binder Properties

Name	Description
Script	Script in Java. See <a href="#">Bean Shell Programming Guide &gt; Form Load Binder</a> for example.
Use AJAX for cascade options?	<div>When checked, this allows these fields to <b>dynamically</b> load available <b>options</b> based on the other field value (grouping column) when dealing with tremendous amount of selections. Read more at <a href="#">Ajax Cascading Drop-Down List</a>.</div> <div>Only available when used as an Options Binder. An array "values" is passed to the script automatically. See <a href="#">Bean Shell Programming Guide &gt; Form Ajax Options Binder</a> for example.</div>
