Workflow Designer and Java Security

Hello,

I am evaluating Joget Workflow for a client.

I have installed V4.0. While designing an app, I click on the "Launch Workflow Designer", and then I open the java webstart.jnlp file after it has downloaded. I get the "Java Application Blocked" error with reason of "Your security settings have blocked a self-signed application from running. I have tried all the recommendations from the knowledge base except building the war file.

I added the URLs for Joget in my java exception site list, and installed the enterprise version of jwdesigner.war to the tomcat instance under the community edition of joget v4.0

I have 2 different environments that I am working with.

1) Windows10 Laptop, running JDK7.

2) Windows 2012 Server, running JDK8.

Please help!

Thanks,

Rob Hammons
