

Create and Scan QR Code

This app serves as a proof of concept to showcase the ability to generate and scan QR Code from a Joget app. You may download the .jwa file in this article and import it into your Joget server.

1. Add a new contact. A QR code will be generated for every added record, as shown in the figure below.

The screenshot displays the 'QR CODE SCANNER' application interface. On the left is a sidebar menu with options: 'Admin Admin' (with a user icon), 'Home', '1 - Add New Contact' (highlighted), '2 - Scan' (with a circular icon containing the number 2), and 'Manage Contact' (with a circular icon containing the number 2). The main content area has a breadcrumb trail 'Home > 1 - Add New Contact'. Below this is a 'Contact' form with two input fields: 'Name' containing 'Bill' and 'Phone' containing '123'. Below the form is a QR code and the text 'Scan this QR Code with the scanner menu'. At the bottom of the form is an orange 'Save' button.

2. You can now use your mobile phone and surf to the same app, and click on the "2 - Scan" menu to scan the code. Please take note that you will need to have your Joget hosted on SSL (https) for camera to work.
