

Add a new Row in Form Grid using script

1. Determine the Form Grid Field ID. In this example, it is "entries".

Edit Form Grid
Edit Form Grid > UI > Validation & Data Binder > Store Binder (Multirow Form Binder) > Load Binder (Multirow Form Binder)

ID *

Label

Form *

Columns

Value	Label	Format Type	Format	Width
date	Date	Text		
category	Category	Text		
purpose	Purpose	Text		
formattedAmount	Amount	Text		

< Prev Next > OK Cancel

2. Construct the JSON object that correspond to the item row's form.

Add Entry [close]

General Expense Entry

Category name: category

Date * name: date

Purpose * name: purpose

Amount * name: amount

Submit

Code

```
var args = new Object();
args['result'] = '{"amount":"1","category":"Medical","claim":"","purpose":"a","date":"11/18/2015","formattedAmount":"$ 1.00"}';
```

3. Based on the identifier in #1, call the FormGrid's add method to add a new row.

Code

```
// the field id is "entries"
var field = FormUtil.getField("entries");
var functionName = window[field.attr("id") + "_add"];
if(typeof functionName === 'function') {
    var args = new Object();
    args['result'] = '{"amount":"1","category":"Medical","claim":"","purpose":"a","date":"11/18/2015","formattedAmount":"$ 1.00"}';
    functionName(args);
}
```
