

Apps and the App Center

- [App Center](#)
- [Installing Apps from Joget Marketplace](#)

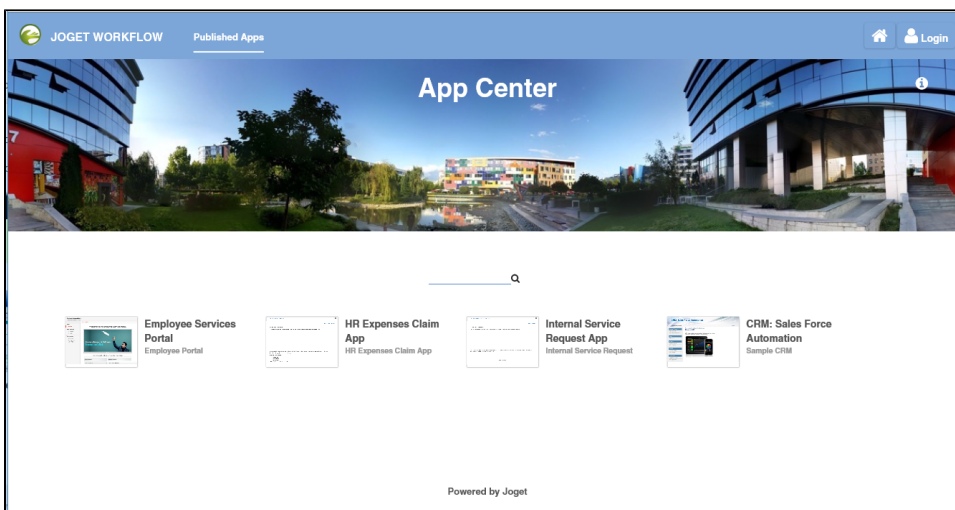

App Center

Joget Workflow apps can range from a simple database-driven app, to a complex approval process, or even a full-fledged solution (e.g. CRM) which incorporates workflow, data management and reporting.

Note

It is also possible to customize or create your own version of the App Center! Refer here for more information: [Customizing App Center](#)

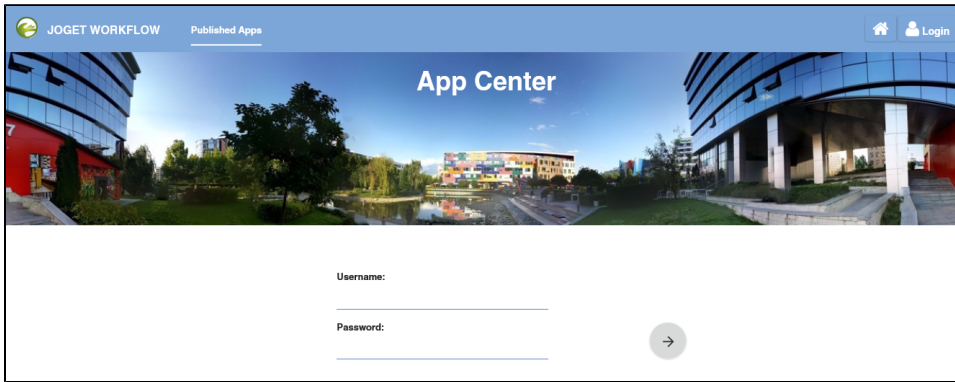

1. The **App Center** is the default landing page in Joget Workflow v6 which displays a grid of published apps. To access the App Center, use a web browser to access the Joget Workflow server at <http://localhost:8080/jw> (Replace **localhost** and **8080** with the appropriate server host and port if necessary)

What is a Joget Workflow App?

A Joget Workflow App is a web application that is designed to run on the Joget Workflow platform.

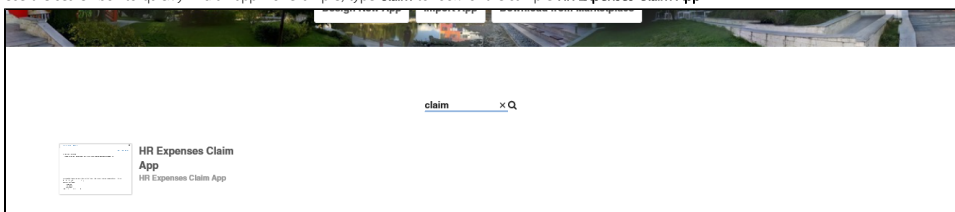

- Click on the **Login** link on the **top right** to login as a user. Each user may have access to different apps depending on permissions.

Some sample logins are provided in a standard installation as follows:

Sample logins
Administrator: Username: admin Password: admin
Normal User (Employee): Username: cat Password: password
Normal User (Manager): Username: clark Password: password

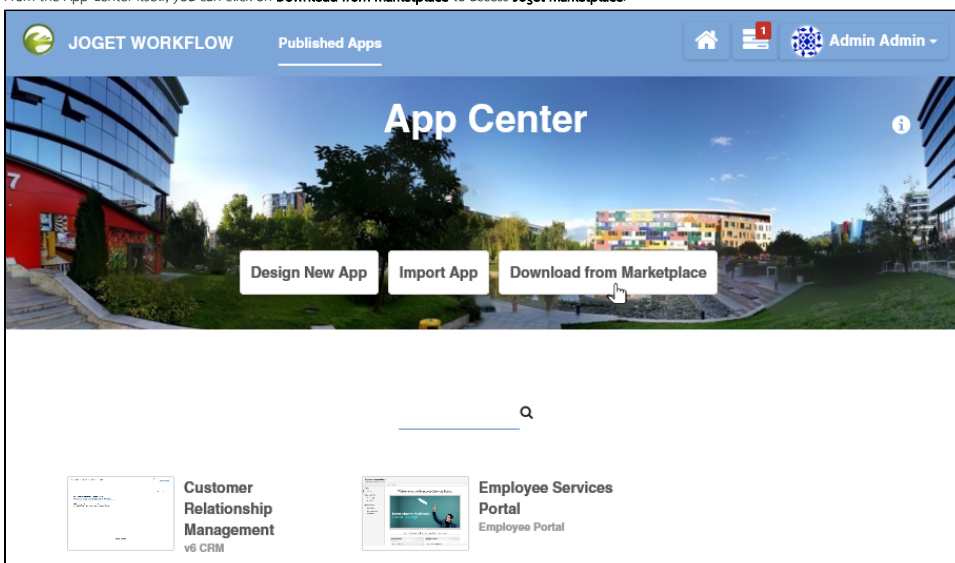

- Use the search box to quickly find an app. For example, type **claim** to look for the sample **HR Expenses Claim App**

- Clicking on the app icon will launch that app in a separate browser window.

Installing Apps from Joget Marketplace

- From the App Center itself, you can click on **Download from Marketplace** to access **Joget Marketplace**.

2. App that is found in the Joget Marketplace can be installed seamlessly into your copy of Joget Workflow.

The screenshot displays the Joget Marketplace web interface. At the top, there is a navigation bar with the Joget Marketplace logo on the left and links for Home, FAQ, Account, Contributor, and Logout on the right. A green 'Install App' button is visible in the top right corner. The main content area features a section titled 'Asset Management and Tracking'. This section includes a descriptive paragraph about the app, two screenshots of the app's interface (one showing a form and the other showing a workflow diagram), and a 'What's New' section. On the right side of the interface, there is a vertical sidebar with icons for 'All Apps', 'Users', 'Monitor', and 'Settings', along with a search icon and a 'What's New' button at the bottom.

Joget Marketplace Home FAQ Account Contributor Logout

Asset Management and Tracking

This is a simple Asset Management app that is developed using Joget Workflow v4 Enterprise App Generator.

The app allows the company to quickly and easily register their assets for tracking.

The asset registration is routed to the respective "Head of Department (HOD)" for approval. The "Approver" can request for clarification, approve or reject the request.

The app is completely free for anyone to use, modify and distribute.

You can extend the functionalities of the app to modify the asset form fields, add reminder notifications, deadlines or multi-level approvals process according to your preset budget amount, etc.
