

# Import and Export Apps

- 
- Importing an App
- Exporting an App

## Importing an App

### Knowledge

Joget Workflow Apps are packaged files that contain Form, Datalist, Userview and Process definitions.

Apps can be exported from another Joget Workflow installation, or downloaded from the **Joget Marketplace**.

Importing a new app in into an environment with **existing App ID** will result in creation of new App Version.

You may also choose to retain or override environment variables and plugin default properties by checking on the check boxes.

Example:-

1. App with ID "leaveSystem" with App Version 2 (Process Version 10) exists in the environment.
2. Importing an App with the **same App ID** will result in creation of App with ID "leaveSystem" with App Version 3 (and Process Version 11).

1. To import an app, first login to the **App Center** as an administrator. Click on the **All Apps** button.

2. Click on **Import App** while hovering over the **Add New App** icon.

3. In the Import App dialog, select the app file, and click on **Upload**.

## Exporting an App

**Definition**

The **Export** option allows one to export out the entire app design into a single file. This is useful when one is performing backup or transferring the app into other server.

### App Data not included

Application data will not be part of the export, only the app design.

1. To export an app, first login to any Userview in the current app as an administrator.
2. In the **Admin Bar** on the right, click on **All Apps**, choose the App intended, and select **Properties & Export** on the left.

3. Click on the **Export** button along the top.

4. A file **.jwa** extension will be generated. You can now take the file to other Joget Workflow server and [Import](#) it in.
