

# ID Generator Field

## Definition

ID Generator Field is used to produce a running number based on an [Environment variable](#). To learn more about its usage, refer to [Generate Reference ID](#).

You will only need to do this if you are using MySQL, as other databases already default to "READ-COMMITTED".

Run following queries in MySQL.

```
SET GLOBAL tx_isolation='READ-COMMITTED';  
SET SESSION tx_isolation='READ-COMMITTED';
```

You will also need to set the following in your my.cnf/my.ini file.

```
[mysqld]  
transaction-isolation = READ-COMMITTED
```

**Expense Claim Details**

Ref AUTO

Title \*

Submitted By #currentUser.firstName# #cui

Note: The title should appear in this format, example, Jan 06

username #currentUser.username#

status New

Label \* Ref

Environment Variable Name \* counter

Format \* REF-?????

Figure 2: ID Generator Field Properties

Name	Description
------	-------------

ID	Element ID (By declaring as "ref", a corresponding database table column "c_ref" will be created)
	<div style="border: 1px solid red; padding: 5px;">  <b>Note when using this element when the form is part of a workflow process</b>  Do not set the id as "id" when the form is used as part of a workflow process. The value generated by this element will not be associated with process instance's ID. </div>
Label	Element Label to be displayed to end user.
Environment Variable Name	Name of the environment variable to be used to keep the running number.
Format	Determines the pattern of the generated value (e.g., "REF-?????" will yield "REF-00001")

Workflow Variable

Figure 3: ID Generator Field Properties - Advanced Options

Name	Description
Hidden?	Determines if the element should be made visible in the form.
Workflow Variable	<p>If the form is part of a workflow process, upon saving of the form (by clicking on "Save as Draft" or "Complete" button). The value in this input field will be saved into the corresponding workflow variable named here.</p> <div style="border: 1px solid gray; padding: 10px;">  <b>Using a non-existent Workflow Variable name</b>  You will get the following warning with the name printed out (e.g. status) in the server log if you attempt to map to a non-existent Workflow Variable. <div style="border: 1px solid gray; padding: 5px; margin-top: 5px;"> <pre>context attribute status does not exist in process context - adding new attributes to the process context is not allowed</pre> </div> </div>
