

Section

Definition
Section is the placeholder to hold Form Elements. Each section has one column in it by default.
New Feature
This feature is enhanced in Joget Workflow v6 to support visibility control rules, section readonly.

Label

Expense Claim Details

Readonly

☐

Display field as Label when readonly?

☐

Figure 2: Section Properties

Name	Description
------	-------------

ID	Element ID Since the section is not an input field, one may leave it as it is.
Label	Section Label
Readonly	Determines if the element is editable. <div><div><div><div><div></div></div><div>New Feature</div></div><div>New Feature added in Joget Workflow v6</div></div></div>
Display field as Label when readonly?	Displays the value of the element as plain text when element is set to "Readonly".

Data Binder

Edit Section > Data Binder > Advanced Options

Load Binder

Store Binder

Bean Shell Form Binder

Directory Form Binder

JDBC Binder

Parent Form Binder

Workflow Form Binder

Figure 3: Section - Data Binder

Name	Description
Load Binder	Optional by default. When it is not set, it will use the parent's binder. You may override this behavior by using its own designated binder by defining it.
Store Binder	Optional by default. When it is not set, it will use the parent's binder. You may override this behavior by using its own designated binder by defining it.
