Figure 1: Datalist Properties

Name	Description
Datalist ID	Datalist ID.
Datalist name	Datalist Name.
Hide Page Size Selector	When checked, page size selector will be hidden to the end users.
Page Size	<div>Items to be displayed per page.</div> <div><ul style="list-style-type: none">Default Size1020304050100</div> <div><div><div>i</div><div>What is the default size?</div></div><div>The default size set is 10. You may override this value by adding in your own message key value with the key being "dbuilder.defaultPageSize" in Manage Messages.</div></div>
Order	<div>Order sequence.</div> <div><ul style="list-style-type: none">ASC - ascendingDESC - desending</div>
Order By	Column to be used for ordering / sorting.
Description	Datalist description meant for developer/admin consumption only to describe the purpose of this element.

Use session to store list state?	<p>If this option is checked, Joget Workflow will maintain the datalist settings previously set for the logged in user, on the following elements:</p> <ul style="list-style-type: none">* all column filter values.* page size.* page number position. <p>The above run time datalist settings will not be changed by Joget Workflow as long as you are still logged in. Once you have logged out of Joget Workflow and logged back in again, all run time datalist settings will be reset to the default. By default, meaning if the page size was set by design to be '50' rows in Datalist Builder, it will now revert back to '50' rows. All column filters will be blank, unless by design you have entered a default value in column properties.</p> <div><div>New Feature</div><div>This is a new feature in Joget Workflow v6.</div></div>
Only show data when filters are submitted?	<p>When checked, Joget Workflow will only display the datalist results after the user input the filter values and click the 'Show' button.</p> <div><div>New Feature</div><div>This is a new feature in Joget Workflow v6.</div></div>
